****Trascrizione****

Okay. Okay, perfect. So guys, are you ready? Shall we sit down and see? Yes. Great. Ottimo. Buongiorno. Buongiorno. Jacopo. Guys, check in. Okay. You can scan the QR code now. Okay. Okay. Jacopo. Okay. We just wait for Jacopo and then we start. Grazie. Okay, guys, are you ready? We're just missing one. Okay. There are eight people joining. Ah, sì. Okay. Perfect. Then we can start. Oh, the music. Ready. Oh. Oh, I didn't have this here. Do we have music? I agree. Okay, next one. Okay. Now tell us why they are gonna stop the music. No, just for a second, I love the music. Okay. So basically- You can go. And so we studied in telematics. Okay, great. We studied in telematics the core patterns. And, uh, in this, um, case study, we see that there is a low and high, uh, visibility and visibility, but there is low, uh, for, for regards the, uh, business model because it's like using five euros per week. So indeed we are in the patterns of how. Okay. And why not now? You guide me please. Because not now. Maybe there's a problem that he wants to solve now. Now from session, depending on how, uh, what is the answer of how, like... So I think how is primary and we can go, go for the correct answer. I said yes, uh, how, how we know now because, uh, now is something that you can already apply. It is ready for the market, but it is not ready to open five years. Okay. Did you get the answer when you, when you were repeating? Okay. I said it as a how and not now because, uh, for now it's something that is already can be applied in the market, but since it's losing five years for to be not ready for the market. And why not wow? Because Right. Okay. Okay. Okay. Okay. But after market- Time for the new ones. Yeah, it goes after marketing. Okay? Yeah. Okay. You're all here, right? Uh, twenty-four. Okay, let's go. Time. One more time. We, we have only three answers. Okay. No, but they were, you know- Quite long to read. Okay. We had no time to finish. I hope it's inside the sheet now. So now we have another case study. So a management is starting selling bricks and mortar flats. Instead setting up three hundred and fifty licenses for a VA house tour software. So using this chemical-chemical-Because it's just, uh, shifting from selling a physical product to a digital product, so it is an core, uh, capitalization. Do you agree? Do you see yourself? I think I agree. Maybe what was, I think, why I also was answering wrongly is because lifetime is taken occasionally before capitalization. Taking lifetime, lifetime is given once you don't work with the person anymore,

like, uh, you avoid the customer usual services. Agreed. Okay. Yeah. So tell everyone. Uh, three on me. Uh, okay. So one. Okay. No, we don't have that inside. Five seconds. Mm-hmm. So... I think- Okay, interesting. Okay. Okay. So can you, uh... Re-- Yeah, exactly. The music? Yeah. So it's easier to talk, and then we return after this. Okay. So why the second one was the- Because we are seeing the differentiation between excitement and engagement. And excitement, um, builds the... A pre-service anticipation is, uh, really before the excite, the en-engagement phase. And we have other phases between, and we have the engagement, which is the active interaction with, uh, uh, the real value. Right. And why not the first one? Anybody has any guess? Maybe because engagement is not only the physical act of interacting. I mean, it's not the... Although it will not strictly into the five E models, I mean, it's like a correct answer, but it's a subset of the last one. Yeah. Could use... It can also be a digital way of interacting, for example. Right. And why not the third one? Anyone guess? Excitement doesn't build over time necessarily. Why? You build it maybe more during engagement. Excitement may be, uh, instead, uh, anticipation, maybe, uh, first engagement and then during the pre-engagement and then during the engagement phase. People are aware of, uh, what it is. Do you get what I mean? I get it. Yeah, I think. Do you want to comment on that? Why is it wrong? Oh, so as Erica said, um, awareness is not, uh, um, like, um, builds, uh, just on excitement phase. It's like a focus of, uh, maybe a campaign or something, uh, not a, as a single phase of the 5E model. Yeah. So excitement can be even more- Yeah. -than this. Mm-hmm. And for also engagement, it's not just, uh, for example, onboarding and signing up- Yeah. -because it's all the interaction with your solution, so it's a more complex process than just, uh, like an onboarding. So can we say that the third option is not wrong, it's just incomplete? Yes. Do you agree? Yeah. So music on. Five seconds for this. Study. Five seconds. Okay. Everyone. Okay. Ah, yeah. Great. Okay. Now here we have another- Sorry. Valente for- You forgot your only group. So make sure you do your task. Okay. So we have another case study. We have a learning on the restaurant order via iPad, and you have human chef, uh, is in the kitchen, closed kitchen with the, with the tickets and, like, cooks. So we have to see where the chef is at. And of course, he is in the back stage because he doesn't receive directly human by human, uh, the order, but via, via tablet. Why not support processes? What do you think? Has to be a support process. You cannot... You're not a key, um, a key actor in this, uh, environment. You're just supporting so the activity can go on without the, without one of these group. Okay. Or it's not just as simple as- Yeah, okay Because, for example, I think that support processes of the... That is not people, is everything in between. For example, uh I request the, the output that will be generated. But- In this case, representative is the support process between the one who's ordering and the chef. So,

so every... Yes. The way I'm seeing it, for example, support processes could be even the iPad itself, like the ordering software. For example, if it fails that day, you can also think about the support process. So I'm saying it's not as key. That day, for example, the ro-- the, the, um, the other people in the team would go and take the orders and bring them to the chef. That's why it's a support process, 'cause, 'cause it's, it can be, um, replicated, it can be, um, be replaced by someone else. Uh, being someone in the backstage is more of an important actor, like the, the actors in this, uh I don't really see it as a hierarchic, uh, situation. It's more like if, as a, a service support process can be people, can be a statue, a physical object, can be process, can be everything. Uh, it's just a matter of, like, where you are positioned in the, in the chain of, uh, for example, creating in, in a restaurant. I think it's really a matter of hierarchy. That's not more important than- Okay. I think that the importance of hierarchies is that these are usually processes that can be automatized, these are processes that can be, uh, changed, and so... But usually the front stage and backstage are the actors that remain the same. Yeah. So let's say the, the biggest difference is that the backstage actors that, uh, are working backstage are actors that are working in the delivery of the service. So, so for example, when the restaurant is open, okay, and people are ordering some foods. While the support processes are something that are crucial to make the service work, but they happen beside the delivery of the service itself. So for example, the maintenance of the app through which somebody can order food is a support process that happens even when the restaurant is closed, for example. So the backstage is everything that happens in the moment the service is delivered, while the support processes can happen in the moment in which the service is delivered or in other moments. They are something that keep going ongoing, that are ongoing to make the service work. While the backstage is in the moment in which the service is happening, let's say. It's also being combined when- Correct. So they're both important, it's just that, uh, yeah, you said it right, they are placed in a different place. Make sense to you? Mm-hmm. Okay. Great. Do we have a last, do we have a last question? Yeah, last one. You hear some people? Yeah, hear people. Seem calm. Calm vibe. Okay. Okay. Cool. Ooh, okay. Okay. So now we have, uh, an amazing study in which, uh, the, the topic of, of tests is, uh, is, uh, awkward. And we learned in the previous lesson that, uh, the test phase is the most important, uh, moment in which you have to fail to see, uh, where some pain points are in your, um, prototype, so that when you are, uh, delivering it, it's ready for the market without any, um, pain. So I think we did it right. Okay. Do you agree? Why is the third option not right? Because you're tell- you're... The point of testing is also to see how the user will use it without telling them everything. So the point is to uncover, uh, what they like, what they don't like, what is the ease of using, um, this product via this film. So if you tell them

every step, uh, it's not guaranteed that the next time they use it, they will follow the same steps. Correct. So tests should work without instructions. Okay. And why the second option is not right? Well, that's what we talked. We got a glimpse with what we saw, but not the exact steps. It's not a matter of how the product is made. It's a matter of you should, uh, put your product in the market as quick as you can, and then iterate from your mistakes, not just try to create the perfect product that already work, is already perfect for the audience, because it doesn't exist probably. Okay. Do you agree, right? Okay. So let's see- Let's see the video. Yeah. Let's see the v-v... Let's- Ah, qui bisogna mettere la mano sopra? Put your fingerIt's secret. Yes. Let's see. Have you telephone? Have you telephone? Okay, thank you. The result. Let's see. Okay, let's see. Okay. Okay. Here we have the results. Oh. Elina. A little bit hard. Ottimo lavoro. Okay. No, è totale- Okay. Bella dopatia. Thank you very much, guys. You're welcome. Io ci avevo scritto due otto otto. Nothing, no. Take your seat. Now we are switching, uh, laptop. Ho fatto molte ride. So a little bit of a feedback for your Mentimeter. Uh, so I think you have done, uh, like a great job really. Uh, the usage of the case study, like it's super interesting because, uh, it give me the idea that you don't, uh, that you didn't just, uh, look at the theory, but you also thought about some practical examples to make the theory alive. So that's super interesting. Just, uh, like maybe for next time, the answers were sometimes too long. Okay. And like the case study was, uh, interesting, but you needed some more time to come up with a great answer. Okay. So just provide more time for answer to your colleagues. But I think it was super interesting to enter into the case study to then go to the theory. So well done, guys. Thank you. Thank you very much. Thank you. Okay, let's go to today's class. Thank you very much. So this is the agenda. So basically today after the Mentimeter, we will start by reviewing the test that you have done in the next two... in the last two weeks. And then, uh, we will, uh, as usual, give you some theoretical, theoretical background about how to review the test. And then there's going to be group work as we know it. Then, uh, we have the break, and then there's going to be a part dedicated to presentation design, because at the end of the course, in the exam phase, you will have to present your ideas. We will give you some instructions about how to pre-to prepare this presentation and what are the main guidelines that you need to, uh, take into consideration when you prepare the presentation. And then you will have time for group work to start preparing the presentation. Today, we will also have a guest lecture. Uh, since you know the guest lectures, sometimes have troubles with trains and so on, we didn't, uh, tell you exactly when it is. Sorry? Ah, okay. Uh, sorry? I asked if he was the guest. Ah, okay. Uh, no, today Professor Fusari is here for the preview, so he will see how, uh, this class is structured. Uh, now the guest lecture is going to be with, um, Michele Strippoli from, uh,

Fastweb. So we will have an overview about how design thinking is used inside Fastweb. So, uh, we will have also this view, uh, again, of a big company using the methodology and using the methodology in the telecommunication sector. And, uh, but I don't spoil you anything, uh, anything more. When Michele Strippoli is, uh, going to come, he will tell you and I will tell you more about it. I don't know exactly the time. I don't want to pros-promise time because we have seen the guest lectures are quite, uh, like people come with the train. At least today we are-- they are coming with the car. I don't know exactly the arrival time, but it's going to be between 11 and 12. Okay. Okay. Okay. And we will be flexible throughout the day with the agenda in order to let, uh, the guest lecturer set in, uh, properly. Okay. Quite clear? Yes. Yeah. So we start. Mentimeter we have done. As usual, we start with the warm-up. I anticipated the warm-up is based more on the part of the presentation design, so on the part that is going to happen after the break. And the, uh, let's say, the message that the warm-up is giving you is concentrated on that part. So how it works, so basically, uh, we will divide into groups. The groups don't have to be the usual groups that you have. We will do one, two, three, one, two, three. So you create, uh, new groups. And you have to decide a movie, a series, a book, some food, some town. So it's up to you to decide what. You just have to pick just three words to describe it. And the other parts, so the other, uh, groups, the other part of the class, should guess what you want to communicate to others. So, okay, so for example, if I tell you my three words are boat, disaster and love, you can guess that I'm thinking about Titanic. Titanic. Correct. So it's a matter of selection of the three main words, the three main concepts that you want to communicate to others in order to let others understand what you have in mind. Okay. I give you three minutes into the groups in order to come up with the three words, and then we present. So easily, one, two, three. One, two, three. One, two, three. One, two, three. One, two. Okay. Three minutes from now. Gruppo due. Tre. Uno. Bellissima. Io l'ho visto tre volte. Antarctic Non si deve capire bene. Io non riesco a capire molto Ah, ok. Stavo cercando di impostare io. 17. Ci sono fuori. No, non, non sto, non sto dicendo. Ti vedo con gli occhi un più lunghi, una cosa così. Quale specie di? Quello, quello. Oppure casa. Quindi mi hanno detto caccia in ospedale. Allora è amore. Infatti non me li conosco i nomi, ma questo è amore. Bellissima ragazza, buon lavoro. Guarda, guarda. Guarda, guarda. Che maglio. Ok guys, you can start to retake a seat. Mi ha proprio indotto a farli, eh. Ok guys, time is over. Which group wants to start? Sono tre. You put the music first. Ok, go. Hospital. Strange love. Anatomy. Ok. Great, thank you very much. Next group. Questa è la seconda. Andiamo noi. With anatomy. Allora, diciamo Race. Red. Sorry, again? Feeling. Race. Red. Cars. Bravo. Wow, abbiamo provato a farla con gli altri. Perché uno... Sì, così. You cheat, oh. Ma dai! Ok, if you, if you heard it, please don't say it. Ok,

guys. Thank you very much. Can I make another one? Yes, you can make another one. Sea, sun and pizza. Castel. Napoli. Vabbè, è un film. Ok. Cat. Orange. And family. Garfield. No. Was I right? Something with, uh, witch. Orange, family, ok. You were right. Ah, ok. Garfield. No, no. No, godfather. Godfather. Orange, eh? Because there is an orange every time someone dies, it turns orange. Ah. Eh, sì. I drink, uh, orange. But who guessed it? Do you want to say it? I say Garfield. No. This is Godfather. No. Not here. But maybe you can do it with another one. The other one. The other one. Yeah. No, there's another one. Okay, let's do the... Okay, guys. Let's do the other one. Please don't anticipate the answer. Okay. I'm sorry. Yeah. Okay. Okay. Okay. Uh, key, buttons, and tunnel. Uh, okay. Key. Tunnel and- Buttons. Can I ask you, key as- Key, yeah. Keys to what kind of- Garbage. Garbage. Or Napoli. Key, tunnel, and- Button. It's a film. Yeah. Ah, um, Shelter, uh, something. It's a cartoon. The TV series on Prime Video. Yeah. Follow Shelter. A sort of cartoon. My dad was Benjamin Button. I agree. Ah, Coraline. Yeah. Yes. Wow. Okay. Thank you very much, guys. Okay. So thank you very much for letting us watching here. Then who is the story of watch The Godfather, which colors? Okay, what do you think is the meaning of this warm-up? If you think about presentation design. Everybody has his point of view, maybe. Okay. That you need to choose, uh, carefully the element that you want to communicate. Okay. Maybe also the previous elements, uh, excitement, engagement, 'cause it's can be a topic or something we can get excited about and then engage, uh, everyone to, um, try to guess this. Okay. Because we have to understand that we have to choose words in order that our audience, uh, can understand and not that, uh, we only understand it. So we have to, like, focus on that- Yeah ...for the presentation. Something else? Yeah. About the market should be simple, so that we choose three words to show what we want. So it's gonna be simple, I guess. Yeah. Okay, guys. So there are some things that you are saying that are, uh, really connected to presentation design. So basically, uh, you will have some time to present your idea, but you will not have time to present everything you have done throughout the course. Mm-hmm. So when you will prepare the presentation, it's really about understanding what are the key elements that you want to communicate to your audience. And the key elements are crucial to select because they're the ones-- they are the ones that let your audience understand what you want to communicate. So basically, in the presentation, you will have to present your idea, but also the path that led you, uh, arrive to your idea, to the final version of your idea. And it's gonna be super important to select and to select what are the main messages that you want to give to your, uh, to your audience. And I agree to what you were saying. It's not about selecting them according to what you know as a group, because of course you know very well your project. But it's about selecting, uh, what are

the things that others can understand about your project. And in case there's something that maybe for you is taken for granted and for others it's not, then you have to take time to explain to others what can be taken for granted. I'll make you an example. Uh, two years ago, there was a group working, uh, for helping blind people go to shopping, for example, at the supermarket. And in the research phase, they came out with a lot-- like really with a lot, a lot of insights about how blind people orient, uh, inside the supermarket, how they choose what to, uh, what to buy, and so on. But in the presentation, they were taking all these insights for granted. And so people were not understanding exactly what was the point of their idea. So it's important when you, for example, explain, uh, an idea, that you let your audience understand the insight that you collected throughout the research phase, that after months, for you are, uh, super clear and super, uh, e-easy, no, to, to think about, but for others are not. So really, in presentation is about selecting, but it's about also selecting, taking into consideration that people in front of you don't know everything you have done so far. So it's about also explaining things and, uh, making others enter into your, um, into your narrative and enter into what you are, uh, trying to explain. Okay. Quite clear? Yes. We will go in deep afterwards, so in the second part of the morning when we will talk about presentation design. But keep that in mind, uh, uh, because there's going to be a part dedicated to that. Okay. So thank you very much also for the warm-up. We will go now to the, uh, third part of the morning, that is the test review. So, uh, two weeks ago, when we met last time, we prepared the test because the idea was that you then, uh, you now, um, have your idea, right? And you, uh, develop a prototype in order to test your idea with users. You had two weeks of time in order to, uh, like, give you the time to do the test. I'm asking you, did you run the test? Mm-hmm. Yes. Yes. Yes. Okay. How much-- So please. Just only pre-testing. So, like, not written, but we have a-also feedbacks on our prototype. Okay, perfect. Not just written. Okay, but, but you did the test? Yeah. Okay, perfect. Important factor was that you had to run the test. Okay, how many did you have the occasion to do? Five? We, we did six. Okay, great. Great number. We did two. Ours was three. Three, four... Three, five. Okay, five more or less. Ours was more from, like, uh, engaging from an audio to opening up a website, so it was around ten people that we managed to, let's say- Okay. -you know, get to. Great. That's a great number. We told you, we told you around five, so I'm happy that you, uh- Mm-hmm. -came up with this number of tests. Okay, super great. So the morning, so the, the time now is going to be dedicated about reviewing what came out of the test because, of course, when you do the test, then it's important to understand what you can learn from the test, from the test, and then how you can change your idea based on the feedback you collected. I know you've done the test, and it's quite normal that maybe you divided, uh, the work.

Some of you, uh, test-tested with some users, some of you tested with other users. Now it's time to put everything together and to understand, okay, now what we do thanks to the feedback we collected. To do that, we, uh, propose you a, a grid. It's called feedback grid, and it's a grid that is useful in order to, let's say, put the insights you collected in the wrong... in the right box in order to make an analysis of the, uh, feedback you collected. So basically, the feedback grid is divided into four main areas, and the first, uh, two areas are about understanding what went good and what went wrong about the test. So basically, it's about answering to the question: What did the testers like? And what came natural, and what were the appreciations of your idea and your prototype? So this is the first part of the grid. The second part of the grid is about understanding the things that were not so good about the prototype. So basically, it's about answering the question: What did they not understand? So they, um, the users. What did the users not understand? Which difficulties did they encounter? Okay, so it's about understanding what basically didn't work about the test. Then in the grid, you have the two lower parts that are about the things to improve and the suggestions and new ideas. So the things to improve, uh, answer to the question: Are there some aspects which were not completely understood, uh, but which can be, uh, reviewed? So it's about understanding what are the things that maybe they weren't right or wrong, that, but maybe they are something that just need a, a review from you as a group. And then the s- the last part is about understanding whether you collected some suggestions or new ideas. So basically, it's about answering to the question: Did the testers provide interesting ideas? Because I don't know if it happened to you, but sometimes you do during the test, maybe the testers suggest you something or make you, uh, come up... Yeah, I see hands shake, uh, heads shaking. So... Or maybe you come up with new inspiration that, uh, uh, the test inspire you. So it's important to highlight them in order then to understand whether they can change a little bit your idea or inspire something new in your ideas. Okay. I have a question. Yes. Does it include the time of the test? Also, I can use it, like, uh, one of them take, like, five minutes, one of them take ten minutes. Does that include the review that I can use it- Mm-hmm. -for the demo, for example? It depends on what you had to test. So if, for example, um, the, the time that users spend in order to do a task is something that you wanted to test- Yeah. -so it's something that is crucial for your idea, then of course this is insight that is important to review and collect, to collect and then review with the group. Yeah, because it's demo- Mm-hmm. -prototype, nothing, like, serious, so I'm not sure, like, in the future, should I take a point about the time? Mm-hmm. Like, seriously, I take it, like, how long they take in one page, how long they take in the second page, how they reach out to find the AI assistant, for example, these things. Yeah. It really depends on the

objective of the test. So for example, if the objective of the test is, I don't know, I did the landing page, and I want to see how immediate is this for users to, for example, request a demo or to, uh, sign in to the product- Yeah. -uh, then of course the time is crucial, and the time is something that you have to record. Okay. While, for example, if you have the landing page, but it's a way, uh... but it's more a mean to introduce the, uh, the product and to understand whether, for example, the words that you use make the user understand what you, uh, want to express, then in that case, for example, time is not a, uh, let's say, is not a relevant metric. Okay. So it really depends on the objective of the test. Okay. Okay. Y-Yeah, yeah. Because I, I, I told you, I only work in prototypes and these things, so nothing like serious app or website. Yeah. So y- what, what you're saying is important because right now you're testing with the prototype, so you're not testing with the final product. Okay. So I don't know whether you're already in the phase in which you can say, for example, "My landing page is perfect, and I can test, uh, how much time people spend in order to understand how to do-" I like when they say like, "Oh, I like this," but it's the demo. Yeah. So. Yeah. But you remember last time we told you the important part of the prototype is not that it has to work perfectly. Mm-hmm. But it's the fact that through the prototype, uh, you want to express like a main concept that you want to test- Okay. -with the, uh, with the users, okay? That is based on the assumption that you want to understand whether it's right or wrong in your product. Ok, so it's ok that is a prototype, it's ok that maybe is not working perfectly. Important factor is that the prototype express what you want to test, what you-- w-- the assumption that you want to put in the user test in the user's hands in order to understand whether it's right or wrong. Ok, quite clear? Yes. Ok. Thank you. Perfect. Ok, so once you have done this, so once you, uh, let's say collected all together as a group the feedback you, uh, you identified, and then you make an analysis of this feedback, putting them into these four quadrants, then there's the last part of the grid that is about understanding, uh, what are the aspects, uh, that you want to change, uh, inside your solution. So it's the so what? Ok, we collected this and that and that and that. And then you understand what are the changes that you will do in your product or service according to the test. So basically, it's about understanding the answer: what do-- what did we learn from test, and how does our solution evolve if we implement feedback? So this is the thing that we will do this morning, uh, together. So we will divide into groups. Every group will have his, uh, feedback grid. And through the feedback gri-grid, we want you to analyze the feedback and understand what you will change in your solution thanks to the, uh, insights you collected from the test. Quite clear? Ok, so good work. Ok, thank you. Ciao. Come è andata? Bene? La valletta Alessia. Ok, va bene. After we did- - After Federico did, uh, all, uh, questo pomeriggio. Federico has. Bravo, ciao Mau. Ma solo

perché lei mi volete vedere. Ha preso? No, no, no, no. Ok. Questi sono dei biscotti che vengono da Bergamo. Chi li vuole li può prendere. Mangiamo, si chiamano? Frutti bocconi. Buoni. Io ne prendo uno. Ecco, grazie. Ci vediamo. Posso mangiare io? Mangia pure. Non è lattosino. Cos'è successo adesso? Confermate che sia togliere. Sì, sì, si fa togliere. Sì, brava. Rita, ma c'ha tutto. Se ci sono i biscotti di voi, mi decido questo. Take care, misbehave, ciao ciao. Allora. Allora. Rita dice che c'ha i quattro biscotti non risolti. Io e lei lo storyboard l'abbiamo fatto. Ok, riferite al prototipo al... Ok. Io c'ho ancora la ricerca dei 60 kg. I don't think we have managed to the good thing with Federico and things. No, ho detto: sarà strapieno, ho detto: oggi faremo 4.000 cappucci. Eh, ho detto: magari anche lei mi sta dicendo tutta sta roba tra quella roba in terra che non l'ha deciso, quindi magari. Abbiamo fatto tutte le nostre interviste sui test con la storyboard e, mmm, la campagna eccetera. E anche con, mmm, un altro tool che ci avete dato. Eeeh, e sono uscite tutte delle robe Ale, abbiamo già un'idea, appunto, poi ti faccio vedere. Sì. Allora, quello della marketing plan. Abbiamo detto che No, le ho cancellate. In realtà lo strategico. E in più dove-- il tempo, il cost-- il costretto da, da far vedere. Non possiamo fare vedere. Però, eh, se non sembra, capito? Altro caso, ma vi servono tutti i tool dei, mmm, tutti quelli che vorreste, quelli che abbiamo utilizzato? E arrangiamo questa. Ok. Di tutto il processo. Poi da lì potete estrapolare. Va bene. Sì, sì. Ecco le KPI abbiamo visto anche c'è la Golden Rule che è tipo Don't go away the party è proprio il, il motto e se partecipi ti viene data una spilletta che poi sarà il nostro KPI perché in base a quante persone hanno la spilletta, delle persone informate, hanno letto, hanno giurato, hanno partecipato, quindi la spilletta è il nostro KPI alla fine. Sì, e c'è un budget, c'è una comparazione tra l'anno prima e quest'anno. In base a quanto scende il, la chiamata del sicco, quella gestione indipendente dei rifiuti rispetto all'anno scorso, vengono accumulati dei soldi che vengono poi investiti nel budget. Cioè se tu compar- Sempre il party, più risparmi, più party viene fatto. L'unico problema che abbiamo, secondo me, che non è quello di questo, sarebbe chiesto più volte se fosse stato possibile più o meno darci un budget, non ce lo danno. Allora però io ho chiesto ad Annalisa, ho chiesto ad Annalisa lei quanto spende come Student Fighter per le feste che ci sono, quindi che sono due feste con due bar, pizza e lei mi fa: "Io come base ho mille". Sì, perché prende l'albero scrocco del mondo, fa proprio quello che più si ubriaca nel mondo perché l'albero c'è. Però c'è margine di- C'è margine. Però spendono tantissimo in questo momento, almeno da come ci hanno descritto non ci hanno parlato di numeri ma ci hanno parlato di una situazione in cui ogni mese non so quanto spendono per le chiamate del sicco, perché ovviamente ogni sacchetto invalidato da, cioè un sacchetto di carta o una bottiglia di plastica invalidato dal sacchetto lo, lo considero un sicco, lo buttano nel sicco perché nessuno se ne occupa. Sì, ci ha

dato periodo. E se loro non vogliono parlare in termini economici, io lo, qui lo posso in termini di peso, cioè in base a quanto peso della chiamata viene ridotto c'è un budget che poi si recupera con Pharma e quindi non fare vedere agli studenti quanti soldi stai risparmiando perché quanto più o meno di sicco sono chiamati e poi si traduce in milestone, in termini di- Anche perché il peso l'abbiamo. Sì, e come è strutturato il party. Infatti abbiamo messo anche un voto per il tema, cioè per renderlo-- che tutti devono essere pa-partecipi a questa iniziativa, si devono sentire appunto anche un po' loro gli organizzatori. Eeeh . Sì, perché questo è stato fatto con le interviste e all'inizio c'era un po' una barriera perché quando Angelica, in genere dicevano: "Io non credo che quella persona la conosco", gli altri annivano: "No, io quello lì lo conosco". Però in effetti dopo mi, mi sembra banale, ale mi fa: "Senti le persone che conosco, le conosco io, conosci te, le conosco io". Quindi alla fine è uno porta nell'altro, tutti si conoscono, cioè tutti abbiamo dei touchpoint con qualcun altro che alla fine dice: "Perché io conosco". Il problema è molto relativo. Cioè dopo anche tu sei di quelli. Dopo loro a macchia d'olio sì, sì, sì, sì, sì, sì, sì, sì, sì è un po' rilassato perché hanno capito che non c'è il controllore, tra virgolette, che era quello che volevamo far arrivare se la persona sta per sbaglio e deve fare il giro completo. Cioè così in effetti io conosco Angelica, però Angelica conosce quell'altro, quell'altro conosce un altro e uno dei- Quindi stiamo parlando- Gliel'ho detto. Gliel'ho detto. E l'altro shift è stato che stavamo pensando a creare dei display appositi perché tu hai una classe tipo un sort of omaggio del, del fine del mondo, com'è famoso per creare dei display, però cioè essendo che Pharma ha già un'applicazione in cui tutti gli studenti la usano tutti i giorni per ordinare il pranzo, il millette, per fare centomila cose, è meglio averlo integrato in un'applicazione in cui controllare se i rifiuti si stanno facendo. Sì, ma perché poi diventa personale così. E potrebbe anche collegarsi Non, non la cambierei. Per ogni questa, questa- Ci vedo molto bene. Vengono anche voi- Sì, è una roba da sottolineare perché Susanna- No, ma perché poi dopo si riconosce la roba che noi dicevamo all'inizio che-- di Alessandra, all'inizio, che lei diceva: "Beh, ma io quello che faccio io ha tutto un impatto, cioè il fatto che io butto questo lì, sono io, sono tutti", e invece anche quello che fai tu ha un impatto. Eh, esatto. Ieri, io e Franci nella chiamata che avevamo fatto c'era Alaska che voleva ascoltarti mentre camminava. Sì. Con Giulia abbiamo parlato all'inizio. Eh, perché la risposta- Ho già mandato una mail per l'incontro per settimana scorsa. No, abbiamo parlato di questo, secondo me sta cosa. Perché poi dopo, cioè io le distribuo, anzi volevo, io volevo che ci fossero ancora sia Giulia che l'altra ragazza, Valentina Ace, mi sembra, che è delle passeggini, che si occupava proprio di questo. Quindi volevo che ci fossero entrambe, che se la spiegassero a loro e poi dopo nel caso eventualmente la Valeria andava via, se siamo nel caso che era interessato era ovviamente a lui.

Però magari ci fosse un brief dove cosa si capirà che cosa è il passeggiare magari anche prima di andare perché- No, no, no, diverso. Anche Giulia è molto interessata. Poi anche loro hanno fatto anche il trash. Questo è quello che dice i trash, perché adesso lo sto usando sempre e per me è meglio. Vogliono parlare di trash proprio in tempo reale. E niente, quindi stavo parlando e ricevo dei pezzi di feedback da parte di chi ha interesse, eh, e tutto bene. Arrivo, eh. Ciao, sei qui per la questione? Sì. Fammi controllare perché non so se ho anche le frusole. Mi è già arrivata l'islam. Che ieri notte vi ho fatto tanto- Ma ieri te che gli hai scritto? Ieri mi ha scritto Elena. A casa. A casa Larry. Mi è arrivato un messaggio aleatorio. Ma cosa cazzo vuole? Cioè era l'audio addirittura. Ho detto: ecco, mi voleva buttare addosso qualcos'altro delle 1500. Ditecelo, ditecelo, ma spiegato quella roba qui della-- perché avevate pensato e io ho subito detto che avevo dimenticato. Ma infatti è una cosa- Sì, esatto. Io mi mancava quella cosa. Io gli dicevo: caspita, però l'altra cosa che ti volevo dire è che io li volevo mettere vicino ai cestini. Però le nere per me lì non possono stare. Sì, allora questa secondo me da anche da integrare con la differenza tra i cestini. Se vogliamo stampare, perché comunque la comunicazione è a tutto, perché questi cestini multiclassi oggi sono fuorvia, non aiutano appunto a una comunicazione del genere. Se vogliamo effettivamente cambiare il behavior di tutte le donne, ci vuole-- bisogna anche mettere nelle condizioni di fare in Italia. Ma infatti senza questi la challenge non c'è. Senza questi noi non la facciamo partire. Cioè se già loro ci dicono: fa' su questi, eh noi diciamo: va beh, allora andiamo. Cioè come che io ci provo, io ed Alessandra da quando noi ci lavoriamo su questa cosa, anche lui, lui ci sarà adesso molto più di me. Ma certe volte non ci stanno, non si mettono a casa. Solitamente nel post ambienti, cioè ci penso molto di più ora che- Però quando siamo in condizioni di poterli fare, ma fatti in terra o a parte a vedere i punti, siamo messi così. Cioè qui, tutto insieme. Cioè, non c'era scritto. Sono dei cestini, possono fare-- non è tutto, cioè non fa tipo il cestino giallo che divide dal cestino verde. Ma tu ci stai? È più corretto, ok. Cosa ci dire? Adesso cambiamo tipo i cestini. Cioè come dire anche quelle cose che fanno tipo- Non è tantoQuindi questi Quello è che direi Quindi cosa si fa per Cioè una cosa tipo, un po' come dire, queste cose possono comparire a costo zero o si può fare a costo più alto, perché a costo zero- Eh però secondo me sono, sono molto meglio delle challenge. Cioè loro è roba finita e scendo se sono nella challenge. Mi gasa tantissimo. Il punto è: loro per me questi bidoni così noi volevamo che fossero colorati, ma nel tuo elenco li vedessi anche a me crea un bias fortissimo se io vedo la cosa che c'è o non c'è. Cioè perché è anche il fatto che tu stai vendendo una cosa che magari non fai finire. Sempre perché ha una scadenza, vedrai che scade. È perché sa bene. E quindi io credo che loro abbiano voglia di toglierlo dall'età. Io enfatizzerei molto nel nostro pitch tanto il

problema e io risolvo il problema con le mole. Cioè uno può anche dire facciamo che teniamo questo bel cestino, questo colore del cestino e mettiamo intorno- Sì. Cioè provate a pensare a delle- Dire così non uscendo Sì, esatto. Pensare a delle cose, come dire, dentro più accettabili, cioè un po' come dire: questo sarebbe l'ideale, sappiamo che non possiamo nel secondo, ma non vogliamo andare lì, invece venderò anche la versione base, step intermedi. Se no, esatto, o il, o il, o il coso di vetro, il tappo. Se no, scusa, anche lì accanto, cioè nei rifiuti solidi la parte solida è uguale, la parte liquida cambia e la coloreremmo. Allora pensate, ripensate. Perché al 100% non risolve il problema. Siamo a zero, qua nessuno? Almeno due o tre step. Va bene, va bene. Che costano di meno, che sono-- che li tengono belli, così di legno. Almeno raggiungia-- sì, in effetti stavo cercando una tra loro e loro, perché se no... Esatto, buon lavoro. Sì, magari come partnership. Quanto tempo abbiamo, però? Non lo so. Però questo è un po' bianco. Io voglio bianco. Lavoriamo. Sassa. Cioè perché mi stanno iniziando a fosseggiare? Mi stanno iniziando a incespicare i cagliaritani. Vorrei un castello. Un castello. Oh, siamo al tavolo 11. Va bene, vediamo questo posto. Ora mi metto al tavolo 20 con tre bottiglie e tre bicchieri. Ho un pennarello se serve. Dimmi, dimmi. Togliti anche tu. Togliti tu. Hai la facilità. Te li fatto ancora? Te li fatto ancora? Il mio fidanzato Maurizio. Oh, buoni. Cioè, non ho mai mangiato le biscotte. Sì, io meringato, l'ho fatto. Però con dei Buoni. Abbiamo dagli anni '90 con Questo è tapinuti. Allora, il leader design chi si riuscirebbe di sposare? Infatti mi sta parlando con Angi perché ci parla settimana prossima. Non lo voglio fare a me. Sì. Quindi a proposito di matrimonio, d'accordo, sposare o il viaggio, magari ci si può- Perché casa del papà tuo figlio? Noi sempre essere molto sentimentali. Però, eeh, insomma, per me non è-- non è qualcosa che mi piace come dimensione, diciamo. E poi anche la sicurezza, perché sai, con il bambino piccolo, insomma, ci sono un sacco di rischi, un sacco di preoccupazioni. È vero lì che pensavo e ce lo speravo proprio tanto. Quindi deve, deve essere una cosa proposta solo- No aspetta, tiriamo e non mi vediamo mai. Ero lì che-- ero lì nel sole e dicevo: no, io non lo chiamo, perché se lo chiamo gli faccio vedere quasi-- che, che, che in cui stassi andando. Avevo fatto-- ti ho fatto vedere quel video che era andata che era il tante che faceva la ragazza. Io dovrei essere lì. Questo se li fa per originalità. Eravamo un po' di amici che si erano riuniti perché è un anniversario. Allora, partecipare alle challenge e i challenge è smotivating. Il tuo ragazzo? Esatto. Oh, falla scrivere, perché non scrive bene. Cosa dici? Scrivi, scrivi. Scrivi allora. No, no, no. Perché così. Se è intervenuto può scrivere. A volte la vita è migliore. Tipo con la musica e la scrittura, sei un'artista. Allora Sami dice: dai, riprendiamo noi. Questa qua, la seconda: partecipare alle challenge è smotivating. Ok. Sì, lì inclusiva c'è la sicurezza. La sicurezza limitata. Se vai più di una volta . Però è anche vero che con la realtà e

porta comunque quelle cose. E allora e ti va Instagram e gli scrivi. Direi di fare prima le cose buone. No, però quello lo so. Pensare a . Va bene, buona venuta. Quanto è bella questa? Rita. Ammazza sei venuta bene in quella foto. E si assomiglia a Rita. È Gemini, mi pare. Rita. Bruca, non riesco perché c'è quello insieme. Ecco le palline. Com'è? È salito un po' ieri. Te ti sei iscritta, hai pagato, però è andato down. No, no, scusa, un momento che vado a vedere. Sì, sì. Era preparato bene. I problemi che ha sia me sia . How do you say it? How can we say it? Something- L'unica cosa adesso vogliamo fare i-- vogliamo parlare di interface con Lagoon, adesso però magari online perché forse guarda . Poi c'è anche l'AI che ci manca. For the whole thing that it might not, but this thing you can also buy the login. So people are actually listening, it's very silent, so people like what does Lagoon remember or like who wants to listen to the full Lagoon experience and then they scan it. It's a website where they go to the sound. They're in Lagoon .No, qualcosa di solito non cambia. Guys, just a logistic information. We still have ten minutes, then we do the coffee break and after the coffee break we will have the test. Mi fa giusto catarro, adesso è messo. I viaggi. Veramente una buona sciarpina. I viaggi. Immagino lo stop. Io sto. You should have done with the lagoon. Vai in tanti. Best day to be. Why the peaches? You should do insurance for dog. Grazie. Andiamo. Dobbiamo dire grazie. By the way you speak Italian, yours is wow. Ci sarebbe se. Dai, va benissimo. Sì, un grande ombrello, sa, noi che ci siamo sempre. In caso andiamo. Ci sono servizi che non esistono. Quindi non è che tanto le luci sono... Siete pendolari. In generale non ho sentito il preambolo. In ogni caso. Ma le news sono di più. No, noi ci lavoriamo. No, noi ci lavoriamo. Poco senso. In effetti adesso ci wäre il meeting alla camera aperitivo insieme esatto, dove siamo con noi e su cui sì, dobbiamo fare qualcosa tutti insieme. A Meolo. C'è qualcosa a Meolo che fa? Cioè, la-- volevole fare il giro dei bar a Meolo. Volevo fare il giro dei bar a Meolo. Del vecchio Stanghel. È un antico Stanghel. Abbiamo finito noi, siamo andati. Allora, solitamente facciamo l'aperitivo. A Meolo. Io volevo fare una cosa con Lucy. L'aperitivo stasera, ma-Non riesco a sfruttare il mio posto come mi piace. Perché? È tutto lavato. E vabbè in Italia. Io mi devo in Italia stasera. Noi dobbiamo lavorare tanti, almeno sfruttando il fuori, dobbiamo stare fuori. Sì, perché in Italia vedo sempre pioggia. Uragani. Quanto costa? They will say yeah, I can do it. Eh infatti. Sai quanto costa fare- Se gli dici di sì, lui è di meno. Cioè io ho detto che dopo mi danno il mio. There will be a idea on the podcast we discussed before, uh, but since he initiated, he wants to protect your idea. He didn't want to- They have reserved it. Yes, but now it's like two hour. Um, and generally like a podcast in collaboration with my music. If you want we, there is like a funny way. Like the ones you see on Instagram where it comes to this, uh, to a podcast. But you're like, you have to persuade the- We have to do some

research. If we have to do that, it's up to you. And you have white hair. But that's not, I think. Not yet, because we have to stick to the sounds. No, we haven't really started. But we have to wait now. I have like maybe just four or more or less say- Yeah, but we risk on losing the- Four years ...making sense and ours is more awareness. So we have to focus on still the sound way of making people know the sounds and then after we go to the other sense. Ma vai laggiù. Luigi, ma non hai detto cosa ti piace? Cioè, io ti ho scritto solo su Instagram. No, su LinkedIn. Ma sotto? Sì, mi sa che era un po' Io ho visto prima che lui aveva fatto pure Instagram, ha fatto TikTok. Non ha fatto-- cioè io gli dico sempre che non fa niente di mercato, ma cioè comunque le cose le so fare. Io mi chiedo perché. E poi ti dico un'altra cosa, che io comunque non ho mai visto, cioè non molti loro che fanno, fanno il lavoro gratis per le persone. Tutte le campagne pubblicitarie che hanno fatto, i video, post- Andiamo a dare anche quattrocento al primo posto. Sì, ma in generale però basta fare pubblicità a quei influencer ovviamente che non è che fanno cose gratis. Questi influencer. Loro che comunque io invece cioè tendo a guardare al mio, il mio lavoro, parlo delle mie cose. E poi cioè ho trovato Carpinio come studente. Io non mi metto a vendere. Ma perché non vuoi vendere una camicia? Ha ragione. Ha ragione. Comunque Manu. Però vinco. Marzotto. Ah, è un altro? Vabbè. Marotto, Marzotto, però cioè, cioè cambiamo- Ok, guys. Ma non è la stessa persona, però vabbè. Guys, time is over. So now we do coffee break and after the coffee break we're gonna have the guest speaker. Ok? So we see you here at five, uh, five to twelve. Male, ma che cazzo vuol dire che cambia solo la lettera? No, che non la sapevo. Perché se noi diciamo Marotto. Sì, assolutamente. Pippa è diventato- Come tu vuoi. Sì, guardami qua, tanto adesso non ti vedo. Ah uno uno. Aspetta. Mi lascio le cuffie. All'ingresso. Sì, presi. Dove vai? A prendere un posto all'ingresso. Male. Allora, se me lo chiedi così. Ma piove? Eh, non lo so. Nel dubbio porto almeno la giacca. È triste the jacket. Ma, ma- Ehi. Ma cosa significa che non parla la ragazza? Ah, non so. Ah, perché volevano utilizzare l'Ale, ma poi non è riuscita. Ah, allora ci sono io. Eh, chiedi a Ale, io non ci-- cioè io vado a casa adesso. Ah, ma è a casa? Sì, sì. Ah, domani ha lezione. Sì, però a Laska c'è anche Ale, quindi non so, organizzerebbero loro in casa. Chiedi a loro. Ci sono dei siti che funzionano. Che sono? Che ne dite di aprire le finestre, Cameraria? What do you think? Because it's gonna be more easy if someone- No, my mentor, my parental guidance said it's fine. It's just, we just need to, they just need to know how much. Ah, I told you, uh, when I shared it, um, how, uh, easy to, like, uh, highlight things. Maybe we make the home page, like, more easy, like show the things that directly you want. Or let's, uh, we can play with the home page what you want to see in the beginning. We can do that. So this is a just idea. I don't know if we can apply it. We can show it No, we can show it. I mean, if we put, uh, I know, a setting-- settings, maybe they

can do it. Maybe. We can show it because- Però, uh, però... Dopo sta pioggia mi viene fame, mi viene una patata che signora. Quanta se ne mangia? No, perché ho voglia di mangiare, perché se no mangio più spesso. Cos'è importante? Un'insalata. A che ora è che finiamo veramente? Non avrei voglia di qualcosa, sono a dieta. Devo mangiare tanto. Non è che c'era su questa roba di Panda? Cioè, come facevamo a lavorare sul tavolo fuori? Io e te abbiamo fatto tutto. Io e te cioè, mica perché lui quando parla ci mette tutto il libro, poi magari dentro dice bestemmie. No, io non riesco, cioè- Sono tutte queste donne, eh. Sono tutte queste donne. No, veramente, bestemmiare è veramente brutto. La mia pazienza ha un limite che è stato tutto un po' già passato ancora martedì. Ma poi, non mi sembra che l'abbiamo detto: "No, questa presentazione non la useremo". Cioè, abbiamo semplicemente detto: "È una roba un po' una cazzatona, però se sai che non abbiamo neanche presentato niente, cioè". Anzi, dovresti dire: "Grazie che hai fatto il lavoro". Non è, non è necessario. Ma che cazzo ne so, un branciclo, che ne so? Che faceva sempre? Madonna, zia. Stamattina ho dormito, tirati quei folati, sei ok? Sì, anche mia nonna mi ha detto: "Senti le finestre, le tapparelle". Tutta roba. Za mia cugina, che fa la maestra di piscina a Cavallina, alle due di questa notte tutti i bianchi chiusi. Ce ne sono proprio quattro. Per il vento? Per il vento. Sono tutti chiusi. Oggi? Domani, se per caso-- se devo andare su domani verso Cannavaro, se si riaprono. Sono una mezza idea. Se vuoi mi mando la trasforma. Devo farmi pagare anche ottanta euro. Sì, da tutti i passi. Il vaso, però va bene. Cos'è sta roba che suona? Un driver. È che non so domani. No, se hai un'idea, nel senso, se vedi che è una cosa-- perché loro s- loro sanno già il giorno dopo come potrebbe essere. Per caso, cioè io sicuramente ne so molto meno da qui. E a quell'aeroporto i soldi? E però fracasso i soldi? Yeah, this is how my family is. I love them. No, please. The my, the my clothing is free of here. Avoid. Dai Nina, Marina. E poi tu ti tira su la felpa? No, no, da qua. Perché? Guarda, perché riesco. Oh, I know it. Tutti e tre hanno maglietta sporchetta. No, perché se no ti prendi il colera. No, no, mi sono- Cambia la temperatura. Vuoi che guardi io? Sì. Aspetta, no, sì. Eccole, ce le ha, ce le ha. Sì? Dai, dai. Cosa vogliono? Sciapente. Dice: "Questa roba cosa vuole?" Allora, c'è Alessandra, Angela. Ok, questo. Questo link. Le parti per l'associazione. Ok, dimmi, dimmi. I company name proprio ti faccio, ci sono le adreesee ci posso arrivare al suo o alla company? Because we finish everything, so I finish it this year? Vabbè. Qua metti quella che vedi. Sì, quella grande. E ti metto la tua, Serena, che c'ho. Attendo. Grazie. Grazie a te. No, vabbè, ma- Con ritardo. Vabbè, ma fa niente, in realtà, tanto siamo super in tempo. Allora. Non lo so. Non lo so. Non lo so più neanche io. Ho la cute troppo grassa per correre, quindi ho una, una voglia di farla. Davvero? Madonna, non hai idea. Non hai idea. Per il progetto. Ma sì, ma non sto facendo niente per il progetto. Ciao. Ciao. Ciao. Bentrovata, felice di

vederti. Buongiorno. Ciao. Ciao, piacere. Stai? Bene, tu? Ce l'abbiamo fatta. Ce l'abbiamo fatta. Siete arrivati. Il tempo non ci è amico, ma... Sì, vai di là perché qui non ci sta bene. Eh. Sì, vai di là che qua. Volete un caffè? Eh, ma sì, dai. Dai. Ma io rimarrei la prima settimana prossima. No, va bene, non c'è nessun problema. E lo facciamo a casa tua. Benissimo. No, è il mio compleanno. Esatto. Eh, perfetto. Dai, bene. È una giornata stressante. Facciamo- Guarda, per la giacca qui fuori ci sono i, gli attaccapanni. Se parliamo tutti delle cose. Organizzo io, quindi a me mi stanno. Organizzi tu, vai. Organizza tutto te. No, non fa il caso perché le abbiamo tolte. No, non vuole parlare con te. È anche, cioè molto sul magari il viaggio, fare un viaggio. Già, no, no, quello lo fai per alla fine, devo usare tutto là, la parte di sviluppo del processo. Ma cosa sarebbe? Io non te lascio niente a terra, ti avverto. Cosa devo fare? Di solito cosa devi fare? Magari ho un tipo parco, anche una tipa, magari ha un tipo parco totale, io con la lunga giacca nera. Però ci vuole, ci vuole un reward, se non è- È giù ora? No. Allora è lì. Oh. Ah. No. Devo dire una cosa? Arriva un altro caffè. Sì, sì, sì, sì. No, lo so. Però anche io avevo pensato bla, bla, bla. Da tipo un momento fa non la vedo. E neanche vicino. Qua mi piace, qua mi piace. Qual è? Qual è? No, no, ma ci-- cioè ci sta. Andrà comunque-- L'importante è quella, cioè provare a mettere qualcosa. Quello è il nostro? Freschi. Aiutami, teniamo conto... No, no, hai detto mica. Sì, ma tu volevi raccontare- Vuole che esca. Eh? Dove era Alessandra? Interessante. Dov'è Ale? Mi hanno detto: "Vieni per il colloquio, facilissimo. 50 minuti in inglese, delle domande impossibili". Così ci può stare. Sì, mi faceva domande veramente strane. Una ragazza. No, era uno strano nome. Con l'accento, tu te lo ricordi l'accento di quello? Non si capiva. Frederick. Frederick. Eh, parla francese praticamente, parla inglese, non si capiva niente. Incognita. Mi faceva queste domande tipo... Infatti tipo lui 10. La tipa l'altra, c'erano tre, la tipa l'altra 10. Tipo, se uno ti dicesse no al lavoro, cosa faresti? Se già è difficile in italiano impappettare sta roba, figurati in inglese. Io non mi ricordo, io ho iniziato a parlare e impappettarmi una quantità di cose che voi non avete idea. Sì, quando mi diceva-- intanto la domanda fatidica: cosa sai di dello spazio? Ho detto: sì, vabbè, cioè. Io non pensavo. E poi devi dire no perché- Ma per che azienda? È per l'ESA. Però tu vai, magari, in colloquio in inglese, incontri, tra i quattro è l'ESA. Non è che fai qualcosa che devi sapere. Infatti io ero tipo là, è stata la parte in cui ho impappato. Poi mi ha detto le challenge per lei, cosa farebbe se dovesse venire da domani, quando la cosa è già avvenuta. Menomale che poi mi ha detto preparate, quindi ho sparato delle cose assurde, però...Non puoi via- Cioè, 50 minuti. Già 50 minuti di inglese immagino che siano tanti. Tu sei l'unica-- c'era lui che parlava francese e non si capiva niente. Un'altra che era tipo cinese, non si capiva niente di inglese. L'altra è l'unica che parlava l'inglese, non so di dov'era, però capiva comunque. Ovviamente. Eh, appunto, appunto,

appunto. È ovvio. Per cui che- È ovvio. Anche perché l'italiano è difficile. Se devi andare a parlare cosa fai? Se finisce di no. Poi l'inglese ancora meno. Alessandra mi ha scritto un messaggio. Va lì, si rotola Infatti mi sono detta: io meno, ma esito meno. Non so perché a me hanno fatto tutte queste domande. Io penso che lei sarebbe la top. Te che miii. Cioè ancora mi facevano domande. Non sopporto più. Tipo se tu venissi qui cosa faresti? Come faresti quello? Come faresti quell'altro? Bruttissimo, bruttissimo. Anzi, con l'inglese X totali, già avevo difficoltà. Prima lo dovevo pensare in italiano che cosa dire, poi in inglese. Bruttissimo. Dov'è Alessandra? Non la trovo. No, ma ha una vita bellissima. Sì, molti lati magari, come quella del dietro. Poi gli ho detto: a te però- Non anche che intanto tutta questa roba. Sì, cosa li guarda? Vuoi andare a, a scambiare dei piatti? Gennaro ti fa tutta fuori al bar. And if we do-- because it's difficult retail mode to do it orizontal, because- You do other stuff like this. It's a model. If we do like this... Can you send me the cement or malta? I do it. You other stuff. Almeno poi è- È quello che so, sì. Doveeee? Doveva fare leave it as a mess. È stata l'antenna, molto probabilmente. Just leave it as a mess. A, a picture on the right. Keep the space or leave it as a picture on the right. No, conviene Win3, perché io sono- Vado a fare un altro? Cioè alle volte fanno delle- Ma li mettiamo in Easy iPhone? Ho già paura di quello che mi stai per far vedere. No, cheee sul nostro- Alessia stai disertando? Che è quello, eh? Deserto. I like what there is a mistake here. Quale 5%? There is like-- there are three packages. The bronze one and the one that's free. 24,99. Or we do only paying. No, no, questo è- Cosa? Cioè scusa, invece che- No, eh, vabbè, però è pitcher ancora più- No, we said let's not do freemium. Sennò li facciamo veramente- Why not do freemium? Sì, ma solo for the first seven days. Ti sento, eh. Hai detto tu sei- Ok, però is not a model, capito? Is a- Perché era solo 84.000. Cioè just no revenue. Queste sono tutte e tre insurance. Doveva essere il- But we need to-- allora- Te la ponessimo come domanda? Also we have to offer it as a price in the app and in the landing. Because the app should price of- Che cosa facciamo? Formuliamolo. Io la farei come domanda. Cioè io qua sto qua anche per capire i ragionamenti di ognuno. Cioè che regola seguo? Quello che tu mi hai detto? E quindi che se sto sotto ai 20 milioni non devo farlo. Se mettono bombastici milioni, mi viene una roba del genere? The thing is we have different price on the plat-- inside the platform and outside. Because here, for example, is 19,90 and here is 14,90. But why? Because here is supposing that you are paying from Apple and here is the landing page with the fixed price. Can you take a screenshot of this, this and this and add them with the box where you put an image? Just like this, it's- No, it's not there. Then I would just do this. Can you do the form here? This one. Take a screenshot of this one. Sì, ma sarebbe- Paste it maybe on the-- va bene. Ma we cannot paste theee- we cannot paste the template that we have on

Miro, automaticamente. Io mi sono iscritta ad una antenna perché non avevo la fibra quando- Like post it template. Il giorno dopo te l'hanno messa. It has to be very like, you know, in a sentence or like-- no, in a sentence, but it has to be very quick point. Però tu volevi adesso? Facciamo slide Mi pare che uMori tipo fino a 10 gigabyte- I like blue Post attivazione 39,1 euro al mese. I think the day before I did that- Sì, because, ok, is not, is not clear, però if you explain we have three packages: exce-essential, premium and elite with AI claims assistant. Ma WiFi me la figura questo no? For the business model is too complex for anyone. Ah niente fibra. C'è fibra. No non è fibra. Questo sì. Soltanto. E vabbè, ovviamente- Però i-I don't like the design. Eh, guarda, no guarda Vodafone Fibra. Eh l'ho scritto. Non è? Non sarà questo. Però i-io non c'è- Best to be box. Perché non make different screen? Eh, different screens. Adesso te lo dico. Dobbiamo andare sulle scritte piccole, non cercare. Ah no, è questa. Qui cala? Eh, no. Non cala da nessuna parte. Aspetta quanto lascio. Verifica attiva, no? È un astuccio di pelle. Ti aspettavo da un po'. Già, forse qui non si-- da sito non si possono prendere. Cos'è questa roba? È un astuccio di pelle. Però secondo me il colore non era quello che c'era sul sito. Per me è troppo chiaro. Sì, ok. Invece di restituirlo al posto di 16. E quanto uscirebbe? 80 milioni? Quello che avevi trovato? 20 milioni? 120 milioni. Ah, 120 milioni. E comprano lo stadio. La vostra somma è 120 milioni. Ecco, dovrebbe essere-- in questo momento è 220 ed è un po' troppo alto. 112. Ah, questo sì. Se no poi- Vabbè, Timo ti invito, ti faccio... Le slide. Eh, sì. Guarda, dacci un primo sguardo. Dici che arrivano per il 28 un sacco di roba. Non sia troppo. No, sicuramente non aveva un po' di senso da farsi. Sicuramente la camera finale non è quella. No, perché di primo ho preso il test, tutti i miei test papabili. Fino a certo, ma se poi fai un zoom, prenderò tutto quello che tu vuoi. Cos'è questo? Cos'è questo? E così si fa. Ah sì, allora. Per me lì devo imparare le auto, ogni tanto. No, sì. Anyway. Io vado a Audi. Guarda. Ma perché devi andare ad Audi? Perché per il colloquio di-- Perché mi hanno poi assegnato ad Audi. Ah. Quindi devo-- vorrei sapere se ho le auto di Audi, perché allora parlavo la 60 euro. Che devi fa? Devo sapere le auto di Audi. Cioè tutti i modelli? Eccoci qui. Allora, se dovete collegare qualcosa, colleghiamolo. Lucas sta registrando per Audi Generation, ha fatto, sta facendo un video da mandare ai capisciano cosa. Sì, ma mi fa morire l'idea di fare un video. Guys, you can come here. We start with the guest lecture. Ah, benissimo. Scusa. Va bene, ho capito. Ok. Perfetto. È collegato. Everybody see it, right? Yes. Great. Allora, mi vieni qui. Marco, vai. No, cioè- Sediamo. No, aspetta un attimo. How is the group work going? It's going. It's going. It's going. Ok. Did you manage to converge? Yes. Yes. Ok, great.'Cause we are following the double diamond process. Oh. So, so we are in the last phases. Almost done, let's say. In case you want to take notes and so on, you can take your, uh, laptop or whatever. Only for notes. Otherwise, you

can just leave. Okay. I'm connecting. Perfect. Okay, you can come here. Sure. Okay, great. So guys, I'm super happy today to introduce our, uh, our guests. So we have Michele Strippoli and Mirco Grignola. Uh, they work in Fastweb, and I'm super ha-happy also to see them again because we used to work together. Um, at Emprom we did a project together with Fastweb to introduce the design thinking methodology, specifically in the IT department. So today, they will tell you how they use design thinking and why they decided to introduce this, uh, methodology and how the whole process of introduction and how now it's w-worked, and how now, uh, the, the, the methodology and the process itself, uh, looks like. Of course, uh, we worked together when Fastweb was just Fastweb, just with in brackets. Uh, right now, Fastweb merged together with, uh, Vodafone. I don't know if you know about this, uh, news. I think it's quite popular as news. So together, uh, Fastweb merged together with Vodafone, so I think it's even more interesting because we will have the occasion to see how an IT department structure the design thinking methodology inside itself, but also now, like, with the challenge of expanding this way of working in another company that didn't have anything before about it. Now, of course, uh, they will tell us, uh, something more about it with more details. So I leave you the stage. Yeah. And, uh, as usual, so they will have a presentation, uh, and then afterwards, uh, we will have the occasion to ask questions and so on. Sure. Thank you. Michele. Yes. Hi, uh, I am, uh, Michele Strippoli. Uh, my background is, uh, in political sciences, um, specialization, uh, sociology. And, uh, in Fastweb, uh, I am, uh, manager of, uh, customer experience and, uh, uh, my mission is, uh, to, to, to make the, the best journey for our customers. And I'm also a coach, a business coach, uh, uh, with, uh, International Coaching Federation. Um, uh, I'm a facilitator. Um, I'm, uh, deeply interested in human, uh, growth. Um, this is, uh, part of my, my story, and I practice, uh, Tai Chi Chuan meditation to be focused. Um, well, I'd be here to share my experience, uh, and, uh, passion, and ask me everything, uh, uh, you need because, uh, uh, I, I, I would like to be clear in, uh, in sha-sharing our concept. Mirco. Well, it's, uh, also a pleasure for me to have the opportunity today to share with you our experience and get your feedback on it. I am Mirco Grignola, as Louise said. I am, uh, in charge of the enterprise architecture department, uh, for Fastweb plus Vodafone. My department, um, and my role is to define guideline and standardization and technological strategy to bring value for the company, for both the technological area in the telco, telco industry, the IT department, and the technology of, let's say, network department. Um, I believe on the strong of the teamwork, and, uh, I think everything we have to do, uh, in work life or, but also in the private life, if we can do this with a team, it's better and it's, it's a, the real opportunity to do something. And I think this is, uh, uh, an, um, this, this is, um, due to my

personal passion, sport passion in the private life because I am a rugby player, so the team is, uh, basically the most important thing in rugby. Okay. Other, uh, uh, information, uh, about, about me, uh, i-it's the first time I say this, uh, this thing. I'm, I'm an apprentice on to-- on the Sweet Medicine Sundance Path. This is a spiritual, uh, path, uh, um, uh, based on s-shamanic, uh, teachings. And, uh, I, I tell you this because, uh, something, uh, in, uh, the presentation, uh, uh, go, go, go there. Okay. Well, I'd like to start with a, a question for you. How many of you have heard the phrase, "I want to do that because we always do that"? I see. Common. Very common, yeah. Well, where, uh, where, where did we start? And, um, we were in the Covid, uh, period, and the waterfall, uh, method, uh, worked well for many years, but, uh, over time it started to show its, uh, its limits. And, um, in, uh, recent times during the project, uh, people have, uh, uh, own personal, uh, goals. And, uh, the real, uh, priority, uh, became, uh, not success, but avoiding the, the blame for the in-inevitable, uh, delay. Um, and even though we, we were in the same, uh, space, uh, especially during the Covid, uh, there was a parallel- -because, uh, we, uh, send a letter each other. After you, uh, answered to me with another letter, but something, uh, not understanding, uh, remained. And so many meetings, uh, uh, were needed to, uh, understand, u-understand each other. Mirco. Well, what's happened and, and, uh, what's, uh, is, uh, the inspiration for us to, to decide to do something, to change something. I-I'd like, uh, from an IT perspective, to speak to you, um, about the waterfall model. So in a waterfall model, that is not a wrong model. It's a model, okay? It's an approach, a possible approach. But we start to get the requirement from the business. So from IT side, we receive the requirement. If something is not, uh, pretty clear, we can ask to the business some, some, uh, deep dive. But, uh, usually, mainly on the biggest project, project, during this phase, the time for the business, it's very... Mmm, the business need a quick time to, to put in place the new service, the new product, the new functionality. So the pressure to the IT side is, "Okay, well, we, we told you everything you want. We give you the requirement. Please start and give us the, the product." So from the IT side, we starting based, mmm, based on the requirement that we, that we get, we starting the work. If there is something that i-- that is not almost clear, we make assumption, and so we start to, uh, design and write a lot of documents with billion of technical word, and ask to the business to approve this document. The document is the explanation about the, um, the product that... the solution, the technical solution to give to the, the business the product. From business side, you don't have technical people. So when you give them the document, they start learn, read something, learning something. Something is not clear, but I trust the IT department. So yes, I sign it. It's approved. You can start. And then after a couple of month, IT work to the, to the conclusion. We complete,

complete the work and release in production the new product or, uh, the new software, the new functionality. What's happened? When the result is in production, business come to see the result of this, uh, this work. So not always for luck, but, uh, sometimes the business is starting to look to the result of, uh, the work, then look to the engineering group, come back to the result, and then looking to the engineering group say, "Really? Are you serious?" So I'm joking a little. But more or less, more or less, this is what's happened sometimes. And this is the tricycle effect. So what's happened? The-- For the business, the requirement is, uh, to create a motorcycle. The analyst understood a bicycle-- and the final result is a tricycle. Okay, um, breaking the cage. What does it mean? Um, years ago, I had an aha moment reading this, uh, uh, change is continuous and inevitable. Uh, there are two ways to deal the change: desperate change and inspired change. What do you think about this? I think that maybe we should, uh, inspire, we should, uh, point to an inspired change. So to change before something bad happen, but usually we react to some situation, so to a problem or to something that need a correction, so we act as desperate change. Because if we don't change, maybe we are gonna have a serious problem inside our business or whatever it is. Yes. Yes, desperate change happens when, uh, uhm, you have no choice, uh, and you have, uh, to change to survive. But, uh, inspired change is when you, uh, you, you dream and you, uh, make your vision, uh, real. Uh, in our lives and organization, uh, we often, uh, get stuck in a, in model. Uh, we create this for, uh, survive or we in-inherit it, this. Um, it's, um, very difficult to-- Sorry. Uh, to leave them, especially when, uh, uh, when they still, uh, kind of work. Um, but we choose, uh, inspiration, we choose inspiration. If we choose inspiration, we can, uh, change before it's too late. Uh, luckily, we choose inspiration. No, Mirco? Yes. Uh, To start this journey, we start from, uh, an inspiration at company level. So we have a clear vision from our top management and from our ce-- uh, CEO. That is, we want to become an infrastructured OTT, over the top player. Do you know who are the over the top player? You use service from over the top player every day, I'm sure. Amazon, Google, this is the over the top player. So are industry that sell service leveraging on connectivity, but connectivity they, they don't have. OK? So what is the infrastru-infrastructured OTT? We are a telco company, so we have the infrastructure, we have the connectivity, but we, at this time, we don't have the services. So the vision is: we want to build the service, sell this service, and in the same time use our infrastructure to support this service. This is the vision behind the OTT, the infrastructured OTT. And this is pretty important because starting the journey to change our mind, to change our way of work. But is not enough. So the top down in-- uh, the top down vision is important to define the vision, the street that we have to follow. But we can achieve something only if every team, every single person is aligned to that vision.

Understand why you have to do something. So is important the inspiration, is important from a top down level, but is crucial that every person in the company get this, this vision. Sotto sta cambiando e toccando- Eh, esatto. Prima o poi deve comparire, di solito. No, non è accaduto. Ok, riproviamo. You are young, but a lot of year, years ago, there is a famous presentation from Microsoft- Mh. Then where they, they show the new operating system. No, non esiste. Durante la presentazione, lo schermo diventa blu con un errore. Può morire io. Quanti Apple add-- Apple addicted quindi... Che senso ha? Scrivibile quanto di scritto bene questa c- Dimmi quale vorresti. C'è prima la verdina, no? Ok, te la mando. La cosa bella è che potremmo girare la presentazione su Mac e... C'è la presentazione, c'è PDF. Cavo, perché noi non usiamo mai l'HDmi, usiamo sempre, sempre il cavo. Ma se, ma se avete una USB-C allora... Però andava, andava fino... Sì, mi sa che qui c'è la USB-C. Prova, prova lei. Proviamo. Sì, ora va bene. Sì, ci avevo provato. Solo che l'avevo impostata così- E tutti, tutti gli- C'era l'hyperbolazione-- l'hyperbolt con i giga giganti, quindi tutto arrivava fino a capo. Vabbè, ho comunque mandato tutte le cose. Trovate il saccheggio, cercate il sacchetto. Non so come farlo quindi Dobbiamo spegnereee quello? Sì, infatti la cosa da fare è spegnerlo. Esatto. È la cosa più-- quindi in teoria si spegne qua, no? Vabbè. No. Du, du, du, du. Super buco. Io ho soltanto il comandino. No, quello lì gira sempre. No, quello lì non funziona di solito. Bisognava- Questo è quello lì. -pezzini localmente. Eccolo. Oh. Sì, eh. Certo, se ci voglio provare- Ta-ra-ra-ra-ra. Aspetta, aspetta, aspetta. Facciamo pensare. Ce l'ha, ce l'ha. Ok, ce l'aveva Fabio. Allora che c'hai fatto, adesso? Ok, il bello della diretta. Ok. In that phase, we contacted Serena and Amplion to bring in, uh, design thinking, and we also joined the Design Thinking Observatory at Politecnico di Milano. And we mixed design thinking, coaching, facilitation, agile, and we create our magic potion. Uh, but how we, uh, how did we understand the problem and the solution? Double diamond, of course. We know. You do it quite well. Well. We analyzed, uh, deeply the problem and found, uh, big gaps, uh, between, uh, requirements and final product. A lot of, of, uh, rework, conflicts and tension, high cost, long time to market, fear and resistance, uh, to change. Nico, but the solution, what was? Yes, the solution, starting from, uh, the need to work together. If you remember, I told you about, uh, the requirement. I give you the requirement, you give me the question, and so on. So we, we understood that it's important to create this sort of core team composed by every part of the company, so composed by the stakeholders, is the, the, the business unit, the designer, uh, from, from the group of, uh, of Michele, and the engineering group from David. So put, uh, all together in a room these people, and they have to work together to, to build the product, the-- and everything we need, we need. It's important also that they-- to, to split in a smaller, uh, project

everything. So what's happened before, um, what's happened is due to the, the big impact that this, um, initiative have to the IT stack. So when you have to deploy a new product, the impact on the IT stack is ve-very high. Okay? If you have to manage in a, in a, in a right way, you have to split this deployment in a smaller thing, and then you can focus on everything and do it, and, uh, make it in the right way. Uh, we need new skills because we have to change our mind. So for example, Scrum Master, Agile Coach, Design Thinking skills. So we have to build these skills. We have to prioritize is much important and very difficult because we have to s-- to split the biggest, uh, elephant in the room. Okay? And to split in the right way, you have to define the priority of everything you, you, you want to build. Um, another way to work all together is to make test all together. So the approach was, I start to test my deployment, but you, that is the stakeholder, and you, that is the designer, test with me the solution. So if something happens, we can fix in the same time. Training and coaching is related also with the skills and the, mm, change of the, the, the working model that we need. And sure, we have to manage-- to define KPI and OKR related to what we have done, what, uh, what we made, and to measure the result of every change that we made, and do that step by step in a progressive way. And this is, uh, our model. Um, the process starts, uh, with a concept in which we define what we want, uh, and, and how. And, um, we define, uh, the, the measure of the, the success in this phase. And, uh, and then, then in the next step, uh, in the preliminary analysis, we, uh, do a checklist, technical checklist, uh, detecting the system needed. Uh, we define costs of, uh, the, the economic im-impact of the, of the project. And, uh, and then we, we can, uh, start with aThe real, uh, the, the real pro-project. And the first, uh, first thing we, we do is, uh, to, to make a, um, a team canvas, that is, uh, um, the moment in which we define our, uh, common goal. Uh, we start, uh, from individual goals, values, need, needs, and, and then we define the pu- the, the purpose. Very, very important to define what we want to create. And, uh, and then, uh, there is the strategic, uh, inception in which, uh, we define, uh, uh, MVPs, uh, the, the slices that, uh, Nicola already talked, um, the planning. And then in the last phase, uh, the bigger phase of the, uh, ana- the, the first part is the inception, uh, in which, uh, we, uh, mm, detail the customer journey, the service blueprint with the, uh, backline activ-- backend activities, uh, and, and so on. Uh, um, system architecture, user stories of course, and, uh, test, uh, test plan. And all of this, uh, in, uh, four weeks, only four weeks time box, because, uh, time box is the guardrail of the, the project. After, after that, after the inception, we start with the sprint solution phase. In this, uh, sprint solution phase, that is, uh, not the, mm, mm, one, one, one point before. We don't, uh, create, uh, and apply an agile framework and the design thinking framework by the book. Okay? And, uh, it's very difficult to apply this kind of

framework in every company by the book, because every company have, uh, own, um, own problem, own method, own systems, own contract with the supplier, and so on. So we have defined our way of working agile with the design thinking. Okay? So this is not the by the book framework of, of, uh, of agile and design thinking. The sprint solution is u- um, was used, and this i-it's used to, uh, split the MVP in, mm, one or more sprint. The sprint is, uh, the time, usually a couple of week, three maximum, where, uh, the IT group, the IT engineering de-deploy and develop the, the, the solution. Okay? So we use the sprint solution to split the MVP in one, two, or maximum three sprint. If, uh, if, uh, we need more than three sp- uh, three sprint, probably the MVP is not right. It's too big. Okay? So this is the time box, uh, principle that, that Davide said. Um, in this, uh, in this sprint, the, the engineering group starting to using Jira as a, as a, the instrument that they use to deploy, uh, starting from every user story to write the tasks. The tasks is the technical conversion of the, the, the solution that they have to implement to answer to the, to the business needs. After that, we start an, uh, an iteration of, uh, an agile cycle. So we start with the, the sprint, the first sprint, then we have the sprint review. Then we, if we have completed everything, we go in a, in a end-to-end phase. Okay? And this is strange for agile framework, but in a larger company as us, we have a lot of systems involved in the chain of the software. So you have-- You need to have this kind of control on the end-to-end process, so you have to test, um, something over the single test made by the, the, the ops group, the, the agile group. And then if everything is okay, we're going live in production. I would like to add something. Uh, uh, uh, you, you can see three, uh, modality of, uh, three, three different processes. Uh, waterfall, uh, we, we, we keep waterfall for, uh, project, technical project without, uh, uh, customer journey. Uh, and, um, agile, uh, is, uh, when, uh, all the factories are, uh, uh, available to, to agile. And, uh, uh, one, uh, invention that is Progetto Due Punto Zero, that mean that, uh, some factories are, uh, in agile mode and some, some others n-not. So we have to, uh, synchronize, uh, the, the two, uh, way of, uh, develop. Okay. Um, yes. W-we can say we are the unique case in Techos with, uh, uh, that applying, um, this, uh, this, this way of working, uh, to all the project, all the project eighty percent, and across with the whole journey. Uh, there are many, uh, Techo companies that, uh, are applying this, but only for digital channels, uh, and front-end experience. Um-And then, uh, we-- and now we are, uh, we have been using, uh, uh, AI to support, uh, our, our process. Uh, uh, but, uh, Mirco, how did we do it? Yes. Um, this unique case, uh, is important because, uh, what, what Michele said is related, um, usually look at the telco company, okay? We looking only on the telco market. There are a lot of telco that try to use agile method and design, design thinking for the digital channel. But, and, uh, I, I come from, uh, this part of the, the, the chain. In the telco,

there is an area that, uh, exists only in the telco that is named OSS, Operational Support Systems. Are the group of application that, uh, speak with the network and configure everything on the network. And these tools are very, very legacy mainly, okay? And apply this kind of, uh, working model, uh, on a legacy application, uh, with, uh, few people that are able to work on that. So people with a, a strong, uh, uh, method, a strong way of work already ex- uh, in place is not easy. And it is for that, that, uh, a lot of, uh, telcos, uh, stop, uh, their journey only on the digital channel. Uh, we start to understand that we, we have to change a lot starting from that part of the chain of the software. So we have started from the most hard part to change, but this is the Fastweb approach usually. And, mm, define to... decide to create a sort of agile team, okay? An entire team dedicated on a single product. So we, we have designed the product for a telco company. It's not easy because there are, uh, functionality and you have to split and design the product for the telco without get all the end-to-end chain, otherwise it's too big to be managed. So we define, uh, in a, in a, in a very, very, mm, very fantasous way, I can say, the, the product for every, for every part of, uh, of, uh, USS and the VSS, and start with one team to try and, uh, uh, see if, if it's work. We change our approach because, uh, as I said, uh, um, at the start, it's very important that every people, every single person is, is involved in this, uh, in this, um, change. So we start to think and speak with every person. For example, the engineering group, the deployment, uh, guys, okay? Who code every day usually is not involved with the, in the design thinking phase, in the design and the requirement... Sorry, in the requirement phase. And we told them that it's important that they are part, they become part of this, uh, phase because they, their view and their opinion can change a lot and help a lot the vision of the product and the design. Because they know very well the limit of the software, the possibility of the software, and, uh, what is the best way to do something. So this, uh, uh, this, this way of work, uh, was not easy, but it's possible to do. Okay? Yes. And we were tenacious and patient. Absolutely. Well, um, have you ever thought how resistance can limit your dreams? Resistance to change, right? Resistance to general, yeah. Mm. Yeah, I think we are all with Rita because- Mm-hmm. -there are a lot of different type of resistances for each one of us. And also, for example, no time is pretty common here, I think. And, uh, also the perceived complexity. Maybe you see something that is too much for you, so you decide to maybe to not apply for this job or you try to... I don't know how to say in English. Sorry. Uh, preclude opportunity. And that's it. Okay. Uh, I, I, I'll tell you a little, a little story. Uh, one, one manager once told me, "You cannot impose this process." He said, uh, people, uh, had no time, meetings are too long, uh, all the documents, uh, were clearer. Uh, but he was applying the same limit, uh, uh, that, uh, he applied to the old model. I, I could not believe this.

Uh, but, uh, uh-Sometimes, uh, it's difficult to, to face, uh, and to deal with, uh, our in-inner frustration, uh, when other not, not to... not, not, uh, do not re-recognize, uh, our work. Very, very hard. But, uh, I, I learned that, uh, it's, uh, a part, uh, of the ga-- part of the game and, uh, we must accept this if you really want to be, uh, leaders, uh, of change. Uh, this is, this is the one of the most important things I, I learned with this, uh, project. Nevertheless, at the same time, data showed that we are producing, uh, better quality, less wo-- less, uh, work, uh, and, uh, faster design. But, uh, uh, sometimes, uh, we stay in discomfort because it feels, uh, familiar. Well, um, as we, as we said, um, it's pretty important to make, make this change to start a, a progressive approach. Okay? Um, we, we decided to put in place, uh, this, uh, this model day by day, step by step. So what I said, we start from one single team, then we start with a single project. Maybe not the biggest project that we have, but we have to, to start from something. Okay? And then, and then we try a little bit to put in place a little evolution every day. So step by step. First step, as we said, define the core team, define the agile team. So we have to start with this project. Define the people that have to participate in this project. First time, we are the member of the core team because we, we want to do that, and we have to put in the game ourself. Okay? Then keep it simple. Um, one important thing, uh, on the Waterfall project, uh, Waterfall way of work, uh, is the approval process. So, uh, someone, um, define the requirements, someone define the answer, and then some other one usually sign off the document, and this is approved. Okay? This is typically what, what's happening. In this way, we want that, uh, the core team have all the accountability and all the possibility to take decision. So every decision, every approval, everything we have to decide, it will be decide from the core team. So the people bringing on the core team have to be decision maker. Okay? Another important thing, uh, is, uh, the control that we have on these, uh, skills, uh, and uh, and um, and, and ownership. Because usually, the team, the biggest company use external, external system integrator, and then you, "I have to do that. Please do that for me." This is the approach. And sometimes, uh, it work. Okay? Everything, it work, but only in the way this, this kind of work can produce the best, the best, uh, the best solution. No-nothing is wrong. Okay? And, uh, we, we decided to insource this kind of skills and approach. So we start to build the team that deploy from themself with the employee, not with the external people. If we need to use external people, we use a, a contractor, uh, name the time material. So I, I pay for your time, and in the end, you, you do what I ask to you, and we work together, um, very close. And this way of work is the best one that we found to make this kind of, uh, of, of, uh, of evolution. The step four, uh, is very close to my, my actual responsibility in Fastroad because, uh, we have to start from a standardization of the solution. Standard solution is

made by, uh, architectural decision, and it's pretty important because, uh, when you build something standard, you can reuse that solution for one more and thousand more, um, product. And this, uh, can, uh, improve your efficiency, uh, less cost. Uh, you can, uh, put in place something very quick time. So it's important. And also the test automation. Mm. Become, um, the chain of the software and the test part is, is one of the, uh, slow-- is the slowly part of the chain. Okay? If you start with the automation, applying AI solution and so on, you can speed up this part of, uh, of the solution. The final one is related to the operation. The operation in a comp-- in an IT company, in a telco company, is the part of, uh, the IT that, uh, take care of the application, the, in, in production. What this mean? If there is an incident, if there is a down, um, if something goes wrong, uh, they are twenty-four hour on twenty-four in place to, to fix problem and so on. But, uh, before that work, their, their focus is only on the technical part of the application. Then we started to change also this part of the chain. Uh, they focus on the business value give from this application. It's totally different, uh, for one reason. When they have, uh... They think only on the technical part, is a sort of first in, first out queue. Okay? This is the pre-- first problem that I received, I start to fix that. Then I have a second problem, I start to fix that. With the business view, you wait and, uh, start to fix the f- the most impactful problem on the business. So I can have, uh, I don't know, I can receive, uh, five different incident. Which is the one that have a huge impact on the business? The four. Okay, I start to fix that. This is most important, to bring value for the company. Our mantra was, and I love it, "Fail fast." What's mean fail fast? You don't, uh, be scared about the fail, okay? But you have to be fast to fix what you fail, so you can try. Okay. It, it doesn't work. We have to analyze, we have to change, we have to change something, then we try again, and now work. Perfect. There is no problem. We do everything in every moment. Obviously, this kind of approach is not applicable if we have to build an airplane. Okay? We cannot fail if we build an airplane. Yes. Uh, uh, it needs to allow the, the, the failure, to face the failure to, to learn with it, with, with, with it. Uh, uh, this is the s- the, the sense of, uh, fast fail. Okay, but is it working? Uh, let numbers talking for us. Yes, uh, it's working. Uh, we, we made a, a huge, uh, training. Thirty... Three hundred and forty people trained. Um, we reduced, uh, by fifty percent, uh, uh, design costs and change, change request, uh, too. Um, yes, lesser work, uh, uh, in general. And, uh, uh, as, uh, I told you before, uh, eighty percent of projects are made with a new model. Mirco. On the technical side, we increase, uh, the quality of, uh, the release of the software with this forty percent decrease on the defect density. The defect density is the number of bugs on defect every one hundred man days of deployment. Okay. Is, is, uh, is the-- this is the fault. About the automation test, today we are in-- we have in place one thousand and one hundred

automated test that running every day to test every day the software that the guys, the, the employee, the, the engineering guys can, can, can change every day for, for, for, for new, new product. And last but not least, and this is related on the operation guys that change the, the type of, uh, priority that they have. We, mm today, we manage and fix the incident that this guy received for the seventy-eight percent in maximum two days. And this is a great, uh, result, achievement. But change, uh, never, never stops. And, uh, uh, we started, uh, again. Uh, uh, as you may know, we are in a big merger between two big companies, Fastweb and Vodafone Italia. But, uh, now we are better surfing the waves. And the story is very short, but, uh, one, one years ago, more or less, um, we launched, we launched a, a, a huge program, uh, of integration, of journeys, processes, uh, systems. Tens of millions of investment and a five-year plan. And in May, we have to design all the journeys, high-level journeys, in only two months because we had to finish the, uh, within, uh, July. And, uh, this was, um, important to, uh, define the e-economic impact of, of the, um, of all, all the transformationUm, but, uh, yes, two months, but the people o-o-of, of the two companies, uh, uh, uh, didn't know, uh, yet each other. So, uh, uh, without a, a clear, uh, guidance, we decided to, to go. And in today's, uh, we, uh, define our new, uh, common method. Yes, faster method base, but a new, a new method, a, a third, uh, method. And, um, we... But we, we, we, we had to, to l-let, let go, uh, of our old identities. We had to create a, a new, uh, identity, one identity. Uh, we started and, uh, we use, uh, of course, design thinking, uh, facilitation, visualization to, to, to make des-design real. And some numbers, uh, two hundred, um, fifty people are involved, ninety workshops, uh, sixty journeys, two hundred capabilities, and all in only two months, uh, uh, with people that, uh, uh, didn't know each other. From an IT perspective, we have, um, a new challenge that we-- The challenge is, uh, called, uh, the DevOps, or better DevSecOps, because security is, uh, uh, every time in, in the middle of the IT side. Um, DevOps, as you know, is a, is a sort of, um, evolution of the agile method. Okay? Starting from a, mm, um, a, a governance, uh, change and, um, organizational change. So put all together operation and, uh, development, okay, in a, in a single team. They start to work, uh, very close, uh, and start front-end works. This is what we have put in place now, okay, from an organizational point of view. But now we have to start with a, a really DevOps rotation. So we approach this, uh, this rotation application by application. There are application that can, um, achieve a minimum level of, uh, of, uh, DevOps, and application that you can put in at the maximum level of automation and, and DevOps. This is another journey that, uh, challenging, challenging journey, but we have already defined our KPI and our OKR for the future, for the next years. It's challenging, but, uh, it's, it's a funny challenge. Okay? Okay. What, what did we learn? The low

energy moments are not failures, but, uh, they are-- they create space, uh, uh, for, uh, creativity. Creativity is, uh, uh, in, um, low, uh, energy moments. And when chaos comes right away, that's where change, change begins. What do you think? Something about fail? Fail. Fail fast. Okay. Can, can I ask something? Um, are you also trying to involve, uh, for example, junior people inside this team because they can maybe also help, uh, to reshape the culture inside the, the small teams in the agile-- with the agile methodology? Because I think o-of course, when you-- even in Gen92, but, uh, so that to-- in this situation of a huge merging with two big company, like young people can be the one who can, uh, absorb and create a new culture and reshaping the company, also helping the others to absorb and create a new culture. So I think, uh, in my opinion, at least, is something really important, uh, in a, in a operation like this also. Yes, I think in, in all the world company, uh, uh, to, uh, make dreams real and not to survive, a company has, uh, has to, to, to, to create a balance between, uh, ex-expertise, experience, uh, curiosity, uh, and, uh, energy. And so, uh, uh, everyone could, could, uh, uh, share his, uh, superpower. I, I, I say, uh, yes. In this merge part, also before, when I speak about the agile team, uh, usually the, the guys that work on, uh, on the software are, are, are young, not, not usually old. So-- And I remember one of these guys that work in my team, he has, uh, he's, uh, he was, uh, twenty-seven, I think. And they build the first team with, um, test-driven development. And, uh, this is the superpower that, uh, you can bring in all the company, because your brain is a digital brain. Mine is not a digital brain. And I, I, I see that, uh, on my daugh-- on my daughters. For example, I, I can tell you, uh, a story. Um, the first one, um, when, uh, when, uh, she was, um, uh, three years-- Come back from the schools and, "Oh, I listen, uh, a song, uh, on YouTube." "Okay, okay." I put on the smart TV YouTube, and so my daughter said, "Go to the television," and start. Mm-hmm. "Dad, it's broken." Why? Because for, for, uh, for, for her i- is, uh, was normal that everything is possible to touch to maybe. Okay. This is a, is an ex-example, but, uh, this is the difference between, uh, the brain of a young guys today and our brain that live all the evolution of the technology. But when I, I was your, uh, your, your age, probably I listen, uh, the CD on-- for the music, uh, buy to the market, to the pirate, uh, pi-- the pirate market. And for you, it's, uh, unacceptable. For you, you, you want to listen everything on Spotify, YouTube Music and so on. So this is a, a very different experience that we live, and this is the crucial point to use young guys to define this kind of evolution. Okay. Before Q&A, uh, yesterday night, I decided to, to show, show this. Um, how do you make your important decisions? Uh, how do you contact y- what you want, truly desire? And how do you get into action? And this wheel, uh, without, uh, any, any brands, uh, uh, uh, shows, uh, the four, uh, aspects of, uh, of self and, um, you know, uh, emotions, mind, body, spirit. And this is-- This axis

is the axis of, uh, the modus, where we are trapped in our repetitive, automatic modus that sometimes, uh, um, um, make, make we, uh, decisions that are n-not, not, not are, uh, truly ours. And this axis is the axis that I, I call, uh, a freedom. Freedom of-- Freedom from the modus and a freedom, freedom to, uh, to choose. Okay. And so, uh, we have, um, more often listen to, to the body and ask, uh, the spirit, because he knows what is, uh, uh, must be done, what, what is right for, for us. And how do-- H-how to do this? Um, we have to, uh, interrupt, uh, uh, the patterns and the inner dialogue. And how? Uh, simply, uh, go to the natural sometimes, uh, ask-- approaching a tree and asking, uh, the spirit, because in that moments you can, you can, uh, stay connected with, uh, your, uh, inner, uh, and pure part, uh, and you can take the right decisions. Guys, if you have any questions or you want to go deeper on something or- Maybe I'm more inter-- I'm also interested in technical questions like how a big company like this, uh... Because I heard all the, for example, Agile technology integration, but how AI is, like, affecting, uh, your m-modus of work, your modus operandi. Like, you also integrated AI in your daily process, in your daily task. Uh, you have, I don't know, an internal model, uh, with, uh, maybe more privacy than external model and stuff. Because of course you are a, a very huge company that hosts service for a lot of people. So I think it's really regulated the use of AI inside a company like this. Yes, Fastweb have build, um, our, our own AI and put it on the market, but also we use this AI for our, uh, internal thing, and also for put the AI on our process. Um, AI is not, uh, magic. So, um, we have AI, but, uh, this not means automatically that we're using the right way AI. So there is a, um, test that, uh, we can try. Again, step by step, we start from a part of the company, we start from this other part. We us- we, we use also other AI, AI product, I don't know, Copilot, Gemini and so on. Okay. Uh, there are-- What, what I learn from to use the, using the AIs that, mm, you cannot use only one AI product. You have to leverage on different product because AI needs to be very vertical to not get hallucination. So when you use a transversal product with a lot of information, a lot of thing, usually this product get, uh, and create hallucination. So you have to use the product-- the right product for the right action that you have to do. This is something I, I can- No, I totally agree. And also, okay, I think you have, um, an R&D department inside the company, so you are also leveraging the, I don't know, people who inside the company can build and try to research and create new technology that then can became new product or new service, uh, faster. Absolutely. Yes, yes, yes. Interesting. And how did you merge this approach with Vodafone when, uh, the fusion, uh, came out? We become a, a single company, so- Mm-hmm ... uh, with different experience and, uh, as common in every interaction, every one of us is complete- convinced that, uh, their own experience is the best. Okay? So every, every time you start from this position, and

then you have to face off and found the best of breed- Mm-hmm ... of the-- of both the approach. But, uh, Michele is the master on that, so Yes. Uh, the story that I, I told you before, it was a story of urgency. In, in that moment, we had a, a, a big challenge, and so, uh, we, uh, we had to, uh, uh, forgetting, uh-- forget for our, uh, identity. Uh, and this was a, a, a success case. But, uh, uh, when, uh, there, uh, there... In this moment, when there is, uh, uh, more time, uh, it's, uh, easily, easily everyone remember his own identity and, uh, try to impose, uh, his, uh, point of view. Um, I think, uh, it will be a, a long way to, to, to reach a new identity. But, uh, it's, uh, the endpoint, not, not one, not, not two, uh, the third. Starting from people. Mm-hmm. Everyone is crucial for, for this, uh, this change. Can I ask two questions? Maybe one more technical. For you said for AI, like, uh, it's more vertical, and I agree on that. But as a company, do you... And as for the tech part, do you think you're heading towards more like customization of these services? Like, like we're heading right now to more custom AI, custom-- to be more custom for the users. I don't know, even with the- If you have a specific- ... services like chatbot, but also other, like, more complex. Okay. Well, pa, pa, pa, pa, pa, mm, good, uh, good question. Uh, when we speak about, uh, AI agent, we speak about customization, usually, because an agent have to do something that, uh, probably work only with, uh, your environment. Uh, I think, uh, AI is a lever to use to do something. And as, uh, as happened in, in every, in every-- with everything, for example, with the agile method and so on, you have to customize, you have to adapt everything on your needs and on your reality. Otherwise, you're, uh... On the other hand, you can choose to change yourself in the way that, uh, the application need, but is not the right way to do thing. So the customization, there is always- Is inevitable. Yes. And my next que-question would be more on like a project management. So what would you say is maybe the, um, hardest, uh, management, uh, let's say, task when, uh, when you underwent like merge and acquisition? Like, uh, I don't know, keeping the team vision aligned or something like that, more like on a project management point of view. Mm. Well, uh, uh, we are-- To complete the, the, the, uh, the other answer, we are-- we have a cultural agent group, uh, me and Mirco. But I, I, I forgot. Uh, well, um, uh, the hardest thing is, uh, to, um, uh, for-- uh, to forget the systems of, of, uh, of the process. Because I don't know why, but, uh, uh, everyone, uh, uh, want to, uh, have his, uh, his, his system. When, uh, we are in the inceptions and we-- and, and we, uh, talk about, uh, uh, the processes, uh, at the end of the story, we are always, uh, uh, uh, on the systems. Uh, system Vodafone was better and Fastweb was better, but, uh, it's, uh, uh, to, uh, to conserve, uh, the habitsBecause they know that system and the, the organization says, uh, uh, groups, uh, operating groups, uh, know. A-and, uh, he, uh, is here, uh, mm, in the second moment, uh, to, uh, train, uh, someone else. And, uh, it's difficult. Uh,

uh, no one want to change systems. And I believe that even if then the com-- like, okay, this is maybe more company-wise, like even if company sometimes is willing to change, to change, on the user side, sometimes it's harder to change the user behavior. Like the user, they want some-- they are used to this behavior, they are used to these steps, and they don't want to change, even if you want to bring something transformative or, uh, I don't know, breakthrough. Uh, internal users or, uh, customers? I mean, like external users, like- Ext-- Oh, yes. Uh, in this moment, uh, for the external user i-is, uh, just like before because, uh, we are on the market with, uh, Voda-Vodafone, uh, and Fastweb, uh, brands. So but, uh, uh, our ambition is mm, to, to, to do something new for, for them. But, uh, in the first release, uh, will be in, uh, um, twenty twenty-seven. So, uh, two years again. Again. Maybe last question from my point of view, because I was thinking now and how do you came up with the, the design thinking solution? Because I think that you as a big company and you had problem, I don't know if you have tried other stuff, but I, I see a really huge company trying a solution and searching for what is the best. So design thinking, uh, reasoning and also design thinking solution was your first guess or you tried something else that doesn't work, it didn't work, and now... and then you decided to, to try this? Well, uh, I encountered the design thinking with my parallel activity coaching. Uh, and, um, and also I saw, uh, um, uh, consultants, uh, went in Fastweb to, uh, to do-- to use-- using this for, um, some projects. And, uh, I, I wonder, uh, but why not us? So, uh, I went to, uh, human resources, uh, uh, and ask them to, to, to try something, uh, to, to find something for, for us. And I, I knew Serena. Uh, and, and but, uh, yes, uh, we determine with our spirit, and we have to be tenacious, uh, patient, uh, uh, to, to face the frustration. But if we have a dream, uh, uh, we can realize, uh, it. For, for me was a, was a dream because, uh, my dream was, uh, create a, a better e-environment, uh, uh, uh, to work for people, uh, for the, for the company, uh, with collaboration and not, uh, barriers, uh, uh, and something like this. This is what, uh, was my, my, my dream. And I, I think, uh, okay, AI, but people, uh, make the difference. Do you guys have any other questions? Okay. Let me just have a look at the time. So we are also perfect in time. So thank you very much. So thank you very much, Mirco and Michele, for your presentation. I think it was super interesting to see how the approach that we are living together, that we are learning together can be applied in such a big company with all the, uh, like backstage that you told us. So thank you very much. I think it was really useful and enlightening. Okay, so we will have ten minutes together. Uh, as promised, I have to give you some information about how the presentation is going to be structured, so you can start preparing your presentation. As we said before with Nicole and, uh, Michele, um, just give us ten minutes, so you can decide whether to stay here or you can go outside as you prefer.

It's very hot here. Yeah. Here is super, super warm. So thank you very much. I'll see you in ten minutes. Thank you. Okay. So just give me... I, I'll make a short, uh, selection of the main slides, and then of course, next time we will go a little bit, uh, more in depth with the presentation. But I give you the first initial information, so you can start work on that. How was the guest lecture? Okay. Okay. Maybe next time we... I ask you deeper feedback on that. Okay. Okay. Sorry, but, uh, I have to keep on time. So presentation design. Uh, basically, when you prepare a presentation, there are two main advantages about preparing a presentation of a project you're running. So the first one is that it helps you and your work team to rationalize everything you did so far. So it's important before, like first for you as a team to rationalize. And then secondly, it's important to communicate your idea to others. So you remember this morning we did a warm-up with the three words. It's about communicating what you have in mind. And basically, this is a framework that you always have to keep in mind when you present something. So there are three elements that make up a presentation. First is the content, then you have the form, and then you have the audience. Okay. The form is basically about how you structure your presentation, whether you want to use slides, what is the look and like, uh... look and feel, sorry- Design ...of the slides, the design of it. Then of course, you have the content, so exactly what you want to present as a message. And everything must be, uh, let's say, designed keeping in mind your audience. So you remember this morning we were saying, um, by choosing the three words for presenting the movie, for example, you have to understand what are the words that can be understood by the audience that you're speaking to. Okay. So basically, always keep in mind that content and form are not, uh, let's say, without any boundaries, but they have to speak to the audience you selected. So starting by the audience, basically the idea, like the main question is asking yourself, w-who, who is this, uh, presentation for? And at the same time, what is the goal that they want to achieve? So usually the goal is different in every situation. In the situation in which you will give us a presentation about your project, basically it's about letting us understand how you went through the past path of design thinking because this is the only moment in the course in which we will also have to evaluate your work. Okay. And maybe, uh, we can say that the... in this type of a presentation, the goal is to achieve a grade. Yeah. Basically, this is true. Okay. And to achieve a grade, but by achieving a grade- See the- ...we need to understand what you understood about design thinking. Then you need to craft the presentation in order to your, uh, target. That it-- because is like your professor, you need to achieve the grade and explain this. Because for example, with investor you need to convince them- Correct. ...to give you money. With client, you need to accept your service and- Yes ...so on and so forth. And a good grade in this course is not

based on how cool your idea is, but it's based on how much you understood the design thinking methodology. So this is what we want to understand from your presentation. Okay? Okay. So about content, basically the final presentation is going to contain three main, uh, elements. The first f- is the path you went through, so basically all the different steps you went through that are, of course, general, but we want to understand how you as a group went through this pa- this, uh, path. Then the highlights of the different stages and the output that you reached. In general, you have twenty minutes, so you will have twenty minutes to present your idea. Then of course, it's not just based on the idea, but it's based on letting us understand how you came up with this idea and give you like a concrete example. So you can say, for example, about path, "We carried out our research interviewing ten families, asking them how they manage waste." So of course, everybody did interview, but we want to understand how you did the interview inside your team. So for example, how many people you interviewed, how you decided to run the interview phase, and so on. Then the highlights. You don't have to say everything that came out of interviews, of course, but you have to select. Remember, the presentation is also about selecting. And the highlight could be, for example, "The main insight we got there from is that parents need some help to teach children how to recycle." So basically, what are the points that came out of the tools that you used, uh, throughout the course. And then the output, the so what. "So we decided to create a product service system that educates children to recycle through a gamification system." So basically in the presentation, we don't want you to just tell us what your idea is about, but we want you to tell us what you did, like the design thinking process is standard for everybody, but what you as a group did, what are the highlights that came out of that phase, and so how you decided to craft your idea or to craft your m- pro... the process you went through according to the highlights you discovered. Okay. How you do it is up to you, so you can decide how to structure your presentation, how to structure the slides, and so on. Just keep in mind you have twenty minutes, and we want to see these three elements, because by seeing these three elements, we reach the goal of understanding how you understood the design thinking process. That's the reason why important, this is not going to be a startup pitch. Okay? This is not a startup pitch. You will have the occasion to design startup pitch in other context. Okay? But we want you to, uh, not just focus on the idea, but focus on the process as well. Why? Because it may be in your career that you will do startup pitches. That's super fine, and it's something that you are also learning from our courses. But it may also be in your career that you work inside a company or you work inside a consultati- consultancy agency, where of course you have to present ideas, but it's super important to present also the process you went through by coming up with something. So this is

something that we train inside this course. So it's about letting people understand the process so that when you come with the idea, they know why you made, uh, s-some decisions. Okay. And in this case, it's also important for you, and in the presentation, to tell us what are the tools, for example, that you find, uh, that you found, uh, more... most useful. Uh, what are the tools that, uh, were better for you to come up with a decision? What are the tools that in your group work didn't work that well? So it's not just about saying design thinking was great. We don't want to hear that. But we want you to critique or review the process you went through. So for example, if you say: "We went through different brainstorming, uh, techniques, uh, none of them worked, and then we decided to pick another one", then for us it's fine. You don't have to tell us that everything we brought inside the course was brilliant, was super great. You have to tell us how you lived that process as a team and what were the highlights that maybe are, uh, for example, the customer journey didn't tell us anything new about the idea, or the customer journey highlighted our view, our understanding of our ideas, so by using that, we made some changes. That's fine. Okay. The important factor is that we want you to critically review the process you went through. And then, of course, for talking to us about the process, you have to also talk about the idea. Okay. Uh, more or less, you have 30 slides of your-- at your disposal, but you can decide whether you want to do more, uh, more or less. And you have to select the most relevant moments of the path, the most relevant insights that you collected, and the most relevant ideas. Okay. Yes. Next time, we will have to-- time to work on your presentations. Then of course, if for next time, so as a homework, if for next time you start designing something, then of course it's easier to then arrive today with something that is also, uh, like, uh, an output in which we can give you some insights and feedback. Okay. Let me just see. Okay, perfect. Group work, group work was supposed to come, but the presentation was longer today. Okay. So thank you very much, guys. As usual, I ask you, I wish you like, and to, uh, reorganize the class. Ok guys, ciao a tutti. Andiamo, eh, Rita? Rita? Ecco. Alex. Oh! Lasciamo- Grazie. Ma avete le cuffie? Sì. No, no. No. Che cos'è qua? È il portaleee... È che ci sono le mie chiavi. Bullet, frase, lo so già. Veramente, tu sei passato dove vuoi, cioè, tutto quello che ti piace c'è. Ti voglio assicurare che è veramente caldo. Per me è troppo, mi faccio male. Paura, zio. Però è caldo, veramente caldo. È veramente caldo, sì. Vabbè, andiamocene fuori. Minchia! E allora è inutile che-- cioè, ma come metto la giacca? Domani dove facciamo? Io le ho già una mattina. Dove finisco? Io... le due e mezza occupata e le tre e mezza. Però possiamo fare Noi ci siamo... Eh, vabbè, ognuno ci piace Volevo fare un paio di foto, così... Ci sono. No, no. Vabbè, allora ci siamo. Sì, scriviamolo a... No, no, no. No, ma sì. No, perché gli schemi servono per fare i acolo. Sì, senza, sono d'accordo. Ma tanto lei non ci porta. Io posso

provare a fare una relazione su qual è la proprietà intellettuale nostra e la vostra. La proprietà intellettuale è mia e vostra. Cioè, il problema. Riesci a portare anche tu Stai a pensare al problema, soluzione, ma che bene? Vai in cucina? Noi non mangiamo dietro, mezz'ora. Ah, ok. Aspetta. Però poi devo spiegare. Va bene, va bene, allora mangiamo di là e poi andiamo a prendere- Ciao, ciao. Ciao. Ciao. Andiamo, eccoci. Non ho capito se dobbiamo proprio ficcarle. Penso che dobbiamo iniziare a ficcarle. Sì, sì, ma dico- Però hanno tantissimooo C'è tutto, adesso se dopo facciamo un'altra roba, ma se vuoi aggiungo e te lo mando dopo. Allora, qua sono- Ti ho mandato adesso perché ci sono dentro oppure aggiornato dopo, quando finiamo? No, no, dopo. Ecco, poi ci sono tante cose che stamattina- Anch'io ho perso il telefono. Hai perso il telefono? Non è che ce l'hai nella borsa? Eh? Non è che ce l'hai? Può essere che l'abbia fatto io. Vabbè, no, ma sono tutti No, parlo delle note che lancio. Sì, perché non-- vabbè, sono sempre-- basta che tu prendi qualcosa e poi dopo- Esatto, esatto, quello. E comunque guardate, i punti forti vengono qua, mi dici che è il loro. Sì, sì, sì, sono d'accordo. Eeeh, e devi diciamo spiegare, cioè mi devi dare una riga di cos'è il punto forte. E basta. E poi quando abbiamo tutto facciamo un testo da trasportare su quello che poi usiamo anche-- ho registrato la lezione di oggi della formazione di domani. Ciao a tutti. Estraiamo il testo di quello che c'è da fare, cioè che vogliamo mettere in inglese e poi vedremo adesso domani mattina, provo a usare Claude e poi vediamo. Domani mattina ci provo anche io con ChatGP stasera. No, è che oggi non so, non so, c'ho fatto in sensoNo, vorrei fermarmi e vorrei- Molto bene. Mi sono sentito bene almeno. Non è che sono già tutti i giorni fatta con questo signore. Tutti i giorni. Ma basta il ragù, forse era migliore. No, dobbiamo vedere tutti i giorni. Male già era. Mangio tipo tutti i giorni. Forse basta il ragù, ora che mi è venuto in mente. Va beh, forse è buono. Vai a riposarti. Perfetto. Rosso. The Red One. E fondiere? Sì. Se la vede bene. Sei nera? No, vabbè, io non so cosa fare. Poi ti lamenti che quella è calda, che quelli non la bevono più, ma va. Yes, sir. Ma le cose che ha detto uno no? Ma poi deve fare, che non capisce neanche quello. Ti scaldano le robe? Allora vai buono. Ma non so, cioè, ma... Teresa risponde tipo non lo so, cioè tipo che non... Eh, per evitare proprio qualsiasi contatto. Tipo Luca sta zitto. Tipo lui che sta zitto, no? Sta zitto. Vabbè. Ah, non te lo devo raccontare, vabbè. No, eh voglio sapere dopo Vabbè. Perché in italiano, per carità? Sì, ma cosa cerca? Beh, per altre volte è venuto fuori che con i cazzi degli altri, cioè sentire le registrazioni.
