

Lecture 7

This lecture integrates applied design thinking practice with meta-reflection on process quality. It begins with student-led case discussions that revisit core frameworks (pattern recognition, service design roles, and the 5E customer journey model), then transitions into a structured method for user test review via a feedback grid. The session also introduces principles of presentation design for the final exam and includes a guest lecture from Fastweb (now merged with Vodafone) on implementing design thinking and agile ways of working inside a large telecommunications organization.

Review of Prior Frameworks Through Case Studies

The opening segment uses interactive case questions to reinforce how theoretical models are applied to ambiguous real-world scenarios.

Key takeaways:

Frameworks are diagnostic lenses requiring justification.

Many wrong answers are incomplete rather than incorrect.

Academic precision matters in distinguishing phases.

How / Now / Wow pattern logic:

How: viable but limited

Now: market-ready

Wow: highly differentiated

Business model shift:

Moving from physical to digital licensing changes value creation and scalability.

5E Model:

Excitement = anticipation

Engagement = interaction

Service Design:

Backstage vs support depends on role in live service delivery.

Prototyping and Testing:

Testing enables failure and learning.

Do not over-guide users.

Feedback Grid:

What worked

What didn't work

What to improve

New ideas

“So what?” = translate into decisions

Metrics:

Depend on test objectives.

Warm-up Exercise:

Three-word description trains communication and audience awareness.

Guest Lecture: Fastweb

Waterfall misalignment (“tricycle effect”).

Inspired vs desperate change.

Integration of design thinking, agile, coaching.

Delivery model:

Cross-functional teams

MVP slicing

Joint testing

Training and KPIs

Modes:

Waterfall

Agile

Hybrid

Legacy systems:

Transformation must include backend.

AI:

Supports testing and development but is not a magic solution.

Results:

Reduced costs, bugs, and faster resolution.

Merger:

Cultural and identity challenges.

Presentation Design:

Content–Form–Audience alignment.

Structure:

Process

Highlights

Outputs

Key principle:

Not a startup pitch.

Show reasoning, tools, and critical reflection.
